FOREWORD

The 1996 Field Health Service Information System (FHSIS) Annual Report is a documentation report that provides information on the different public health programs. These data are useful for monitoring and evaluating health programs, planning health activities, budgeting supplies and logistics, among others. It is a consolidation of health data generated by RHUs and BHSs nationwide and reflect their health program accomplishment. Generally, data generated are used by managers of the DOH at the national level and local government officials for planning and evaluation.

This report is the output of the modification of FHSIS in 1996 whereby only a few selected set of indicators are forwarded to the central office level. This move is an offshoot of the devolution process. Data requirements from the national level have been reduced to a minimum set of indicators enough to sustain DOH information needs according to its new role. The frequency of reporting is on a quarterly and annual basis with manual and computerized data processing at the provincial level.

These information could not be maintained without the participation and support of people in Local Government Units: local health workers at the barangay, municipal, city and provincial levels; and the staff at the regional health offices and Health Intelligence Service-Department of Health.

ALBERTO G. ROMUALDEZ, JR., M.D.
Secretary of Health

FIELD HEALTH SERVICE INFORMATION SYSTEM
ANNUAL REPORT - 1996

TABLE OF CONTENTS

	<u>Page</u>
1 Prenatal and Postpartum Care Report.....	1 - 8
2 EPI and Breastfeeding Report.....	9 - 16
3 CDD and ARI Report.....	17 - 24
4a Nutrition Report - Food Supplementation among Moderately Underweight Children.....	25 - 32
4b Nutrition Report - Food Supplementation among Severely Underweight Children	33 - 40
4c Nutrition Report - Iron and Iodized Oil	41 - 48
4d Nutrition Report - Vitamin A	49 - 56
5a Family Planning - New Acceptors By Method	57 - 64
5b Family Planning - Continuing Users By Method	65 - 72
6a Dental Health - Preschoolers & Schoolers	73 - 80
6b Dental Health - Pregnant Women and other Adults	80 - 88
7 National Tuberculosis Program Report.....	89 - 96
8 Leprosy Report.....	97 - 104

Page

9	Schistosomiasis.....	105 - 107
10	Rabies Report.....	108 - 115
11	Filariasis Report.....	116 - 117
12	Malaria Report.....	118 - 125
13	Sexually Transmitted Disease Report.....	126 - 133
14	Demographic Report.....	134 - 141
15	Environmental Report - Household Sanitation.....	142 - 149
16	Environmental Report - Food Establishments and Handlers.....	150 - 157
17	Natality Report - Livebirths by gender & weight	158 - 165
18	Natality Report - Livebirths by attendance.....	166 - 173
19	Natality Report - Deliveries by Type & Place	174 - 181
20	Natality Report - Type of Pregnancy	182 - 189
21	Mortality Report - Deaths by Gender	190 - 197
22	Notifiable Diseases	198 - 227
23	Definition of Terms.....	228 - 233

SUMMARY

1996 FHSIS REPORT

HEALTH STATUS

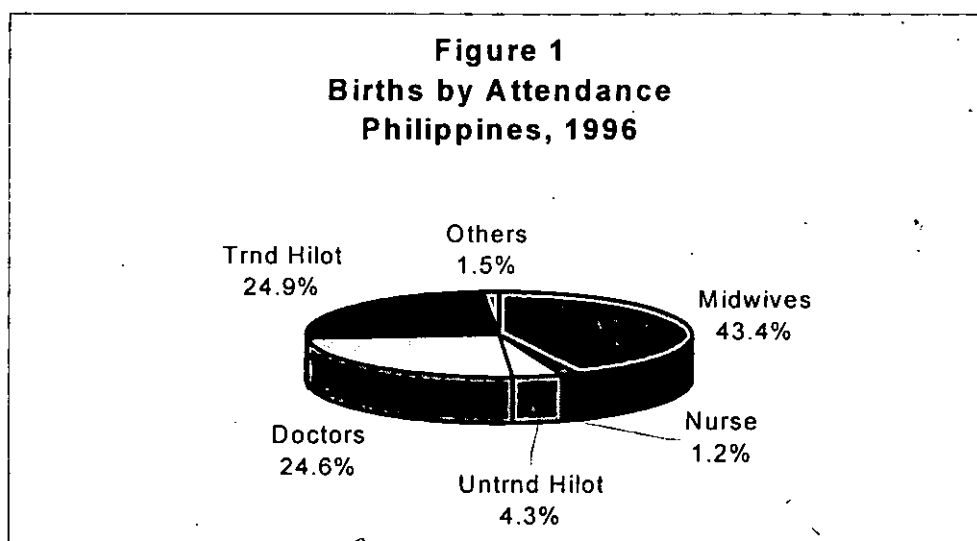

1. Population

Population estimates were computed based on the 1995 actual census. In 1996, the Philippine population was around 70,263,013 with an estimated households of 11,753,143 in the entire country.

Health workers providing health care services at the rural health units (RHUs) and barangay health stations (BHSs) were: active BHWs (152,190); trained birth attendants (33,506); midwives (14,293); nurses (4,808); non-technical personnel (5,834); doctors (3,196); engineers/sanitary inspectors (3,147); dentists (1,730); medical technologists (1,130); dental aides (971) and nutritionist (332).

2. Births

There were 1,414,486 livebirths registered in 1996. Of the total births 722,258 (51%) were male and 692,228 (49%) were female. Weight at birth of 2500 grams and greater registered 1,207,771.

As to birth attendance, 69% were attended by professional health workers (doctors, nurses, midwives), 25% by trained hilot, 6% by untrained and other personnel. (Figure 1)

Fifty eight percent were reported as normal pregnancy, 22.6% were risk pregnancy and the rest, 19.6% were of undetermined status.

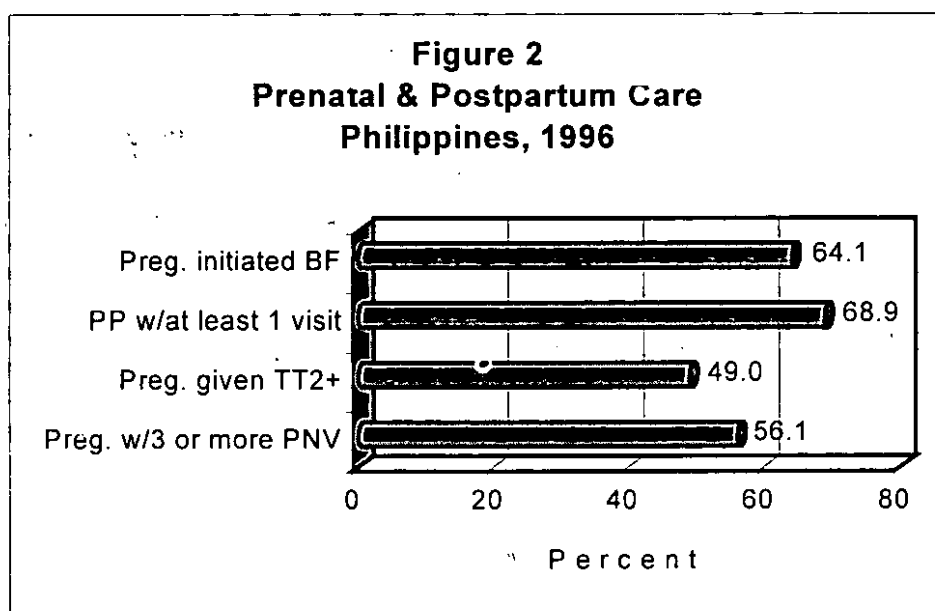

3. Mortality

There were 274,000 deaths registered by field health workers in 1996. Of the total deaths, 58% were male and 42% were female. One hundred fifty four per 10,000 livebirths were infant deaths; 6 for every 10,000 livebirths died of maternal condition; 3 per 10,000 livebirths died of neonatal tetanus and 4 out of every 10,000 were stillbirths.

HEALTH PROGRAMS:

1. Maternal and Child Health

Pregnancy is an exciting normal and physiologic event but may turn out to be a high risk condition that affects both the mother and the unborn child. The compromised condition of the mother brought about by complications during pregnancy and the sole dependence of the baby on the mother makes maternal care crucial to the attainment of their health and well-being

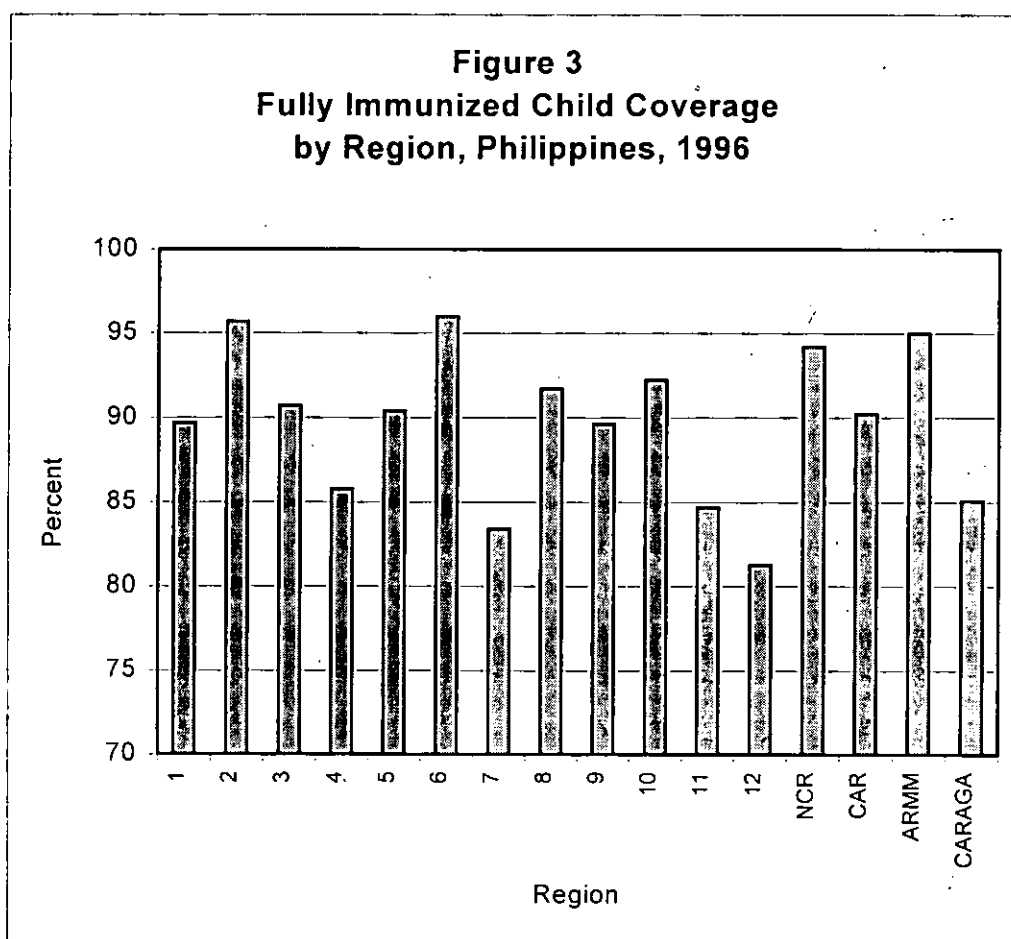

Of the estimated 2,454,549 pregnant women in 1996, only 56.1% had three or more prenatal visits to public health facilities. The rest could have gone to the private practitioners, hospitals and traditional birth attendants for maternal care, or none at all, thus failing to value these services for varied reasons. The highest coverage was observed in Region 1 with 81.7%. Tetanus toxoid was given to around half of the targeted pregnant women.

Sixty nine percent of the targeted population have at least one postpartum visit either at the public health facilities or at home. (Figure 2)

2. Expanded Program on Immunization and Breastfeeding

Of the targeted population of 2,103,900 in 1996, 89.8% were fully immunized children by 9-11 months old. Region 6 has reported the highest FIC coverage with 96% while Region 12 has reported lowest with 81.3%. (Figure 3)

Sixty two percent of infants were given 3 doses of Hepatitis B vaccine.

There were 1,317,333 infants seen at fourth month of age. Around 85% of whom were exclusively breastfed which means that no other food or drink except breastmilk from birth to at least 4 months of age was given.

3. Control of Diarrhea Diseases & Acute Respiratory Infection

Diarrheal disease remains to be a major public health concern. Of the population with diarrhea, 35.5% diarrheal cases 0-59 months old were given oresol.

On the other hand, among the 0-59 months old children with pneumonia, 88.9% were given treatment.

4. Nutrition

There were 1,145,936 moderately underweight children 6-59 months old identified in 1996. Among those moderately underweight identified, 6.2% were initiated food supplementation while 23.7% were being given follow-up food supplementation. Only 9% were rehabilitated.

Out of the total 6-59 months old children, only 3.9% were identified to be severely underweight. Around 29% were initiated food supplementation and 73.6% were given follow-up. Thirty one percent were rehabilitated.

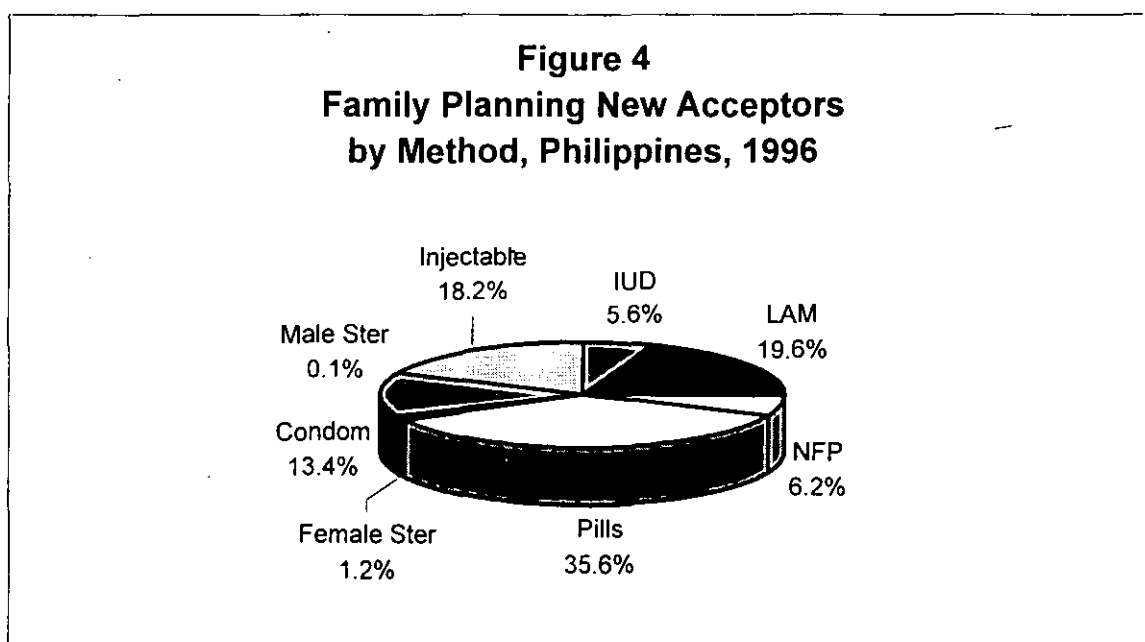

For iron supplementation, only 39.7% of pregnant women and 36.4% postpartum mothers were given complete iron dosage. By complete iron dosage, the pregnant woman is given 2 tablets daily starting on the 5th month of pregnancy to complete 250 tablets for the remaining period of pregnancy, while 2 tablets of ferrous sulfate are given daily to postpartum mothers for 2 months or a total of 125 tablets.

Among the childbearing age women 15-49 years of age, only 21.3% were given iodine supplements.

Vitamin A was given to 52% of lactating mothers, 66.7% of children 9-11 months old and 94% of children 12-59 months old.

5. Family Planning

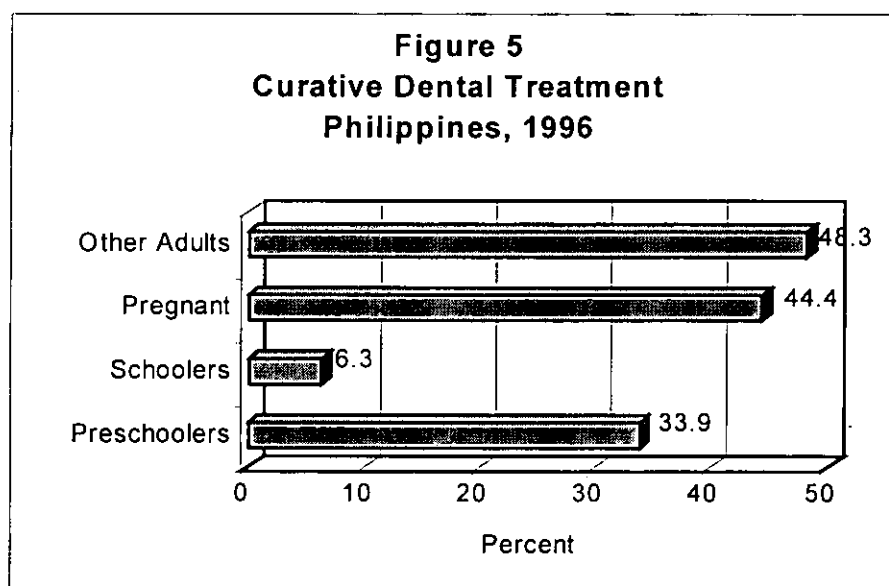

The local government units were able to recruit 1,087,945 as new acceptors in 1996. Majority preferred pills (35.6%), followed by LAM (19.6%), injectables (18.2%), condom (13.4%), natural family planning method (6.2%), IUD (5.6%), female and male sterilization (1.2% and 0.1% respectively). (Figure 4)

On the other hand, a total of 3,358,765 current users of family planning methods were registered at the field health facilities. The pill still remains to be the most preferred method. This is followed by the use of IUD, condom and injectable being second, third and fourth, respectively.

6. Dental Health Program

Dental health services provided are both curative and preventive treatment.

Among the groups targeted for curative treatment, the group classified as "other adults" were provided the highest coverage compared to the pregnant women (44%) and the preschoolers (34%). Schoolers were given the least curative treatment. (Figure 5)

For preventive measures, 164.8% schoolers were given treatment while only 60.6% pregnant women were given treatment.

7. Disease Control Program

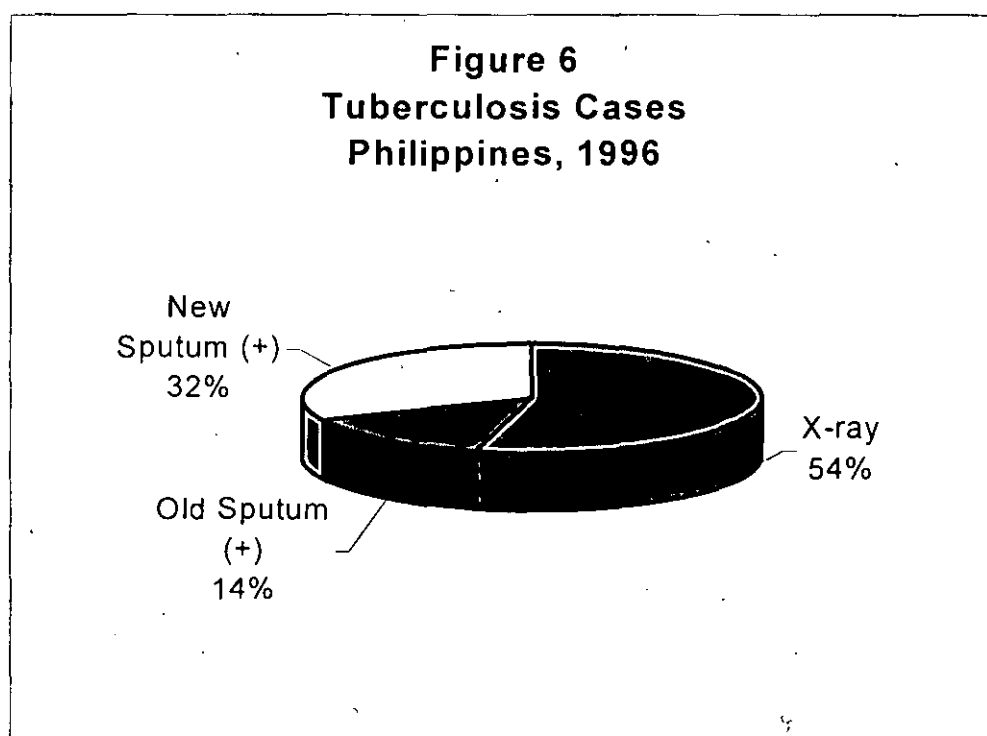

*For **Leprosy Control Program**, the report shows that 3,762 new cases were diagnosed in 1996. 7,397 were continuing treatment and only 3,231 had completed treatment.*

*For **Schistosomiasis Control Program**, 374,263 stools were examined and only 4.1% or 15,293 were found to be positive. Out of the positive cases, 83.7% or 12,795 were given treatment.*

*For **Rabies Control Program**, the report shows that 35,790 had animal bites, of which only 29.8% or 10,669 were given post exposure examination.*

*For **Filariasis Control Program**, there were 1,504 filariasis cases seen and only 44.7% were given treatment.*

*For **Tuberculosis Control Program**, a total of 271,882 were found to be positive for tuberculosis. Around fifty four percent or 146,785 were x-ray positive, 32% or 87,075 were new sputum positive, and only 14% or 38,022 were old sputum positive. (see Figure 6)*

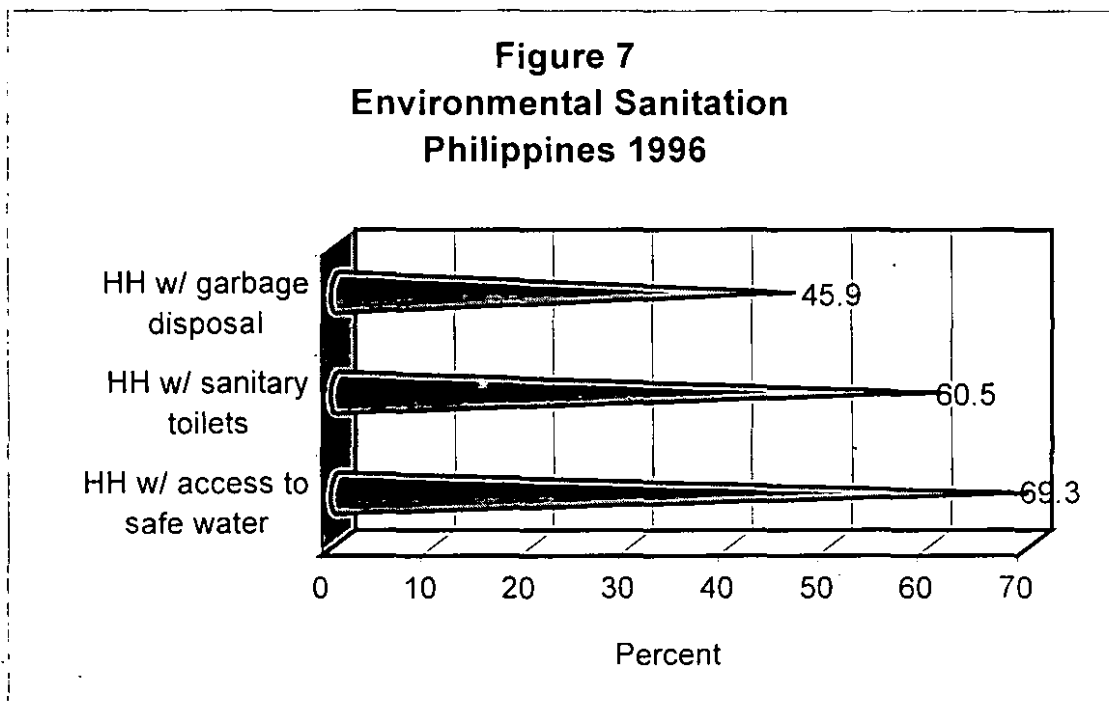

*For **Malaria Control Program**, a total of 323,139 were clinically diagnosed. Out of those clinically diagnosed cases, 15.7% were laboratory confirmed cases. Only 40% of those clinically diagnosed were given treatment.*

*For **Sexually Transmitted Disease Program**, the report shows that 20,761 were reported to have vaginal discharge, 4,514 were with urethral discharge and 1,809 were found to have genital ulcers.*

8. Environmental Health Program

There were 11,573,379 households in the Philippines in 1996. Households with access to safe water supply were reported to be around 8 million or 69.3%. Of these, 31.3% are classified as Level I, 10.6% are Level II and 27.3% are Level III. On the other hand, only 60.5% households have sanitary toilets while 45.9% have satisfactory garbage disposal. Households with complete sanitation facilities registered 41.6%. (Figure 7)

Of the food establishments reported, 70.4% had sanitary permits.

A total of 781,404 food handlers were reported of which 89% were given health certificates.

DEFINITION OF TERMS

MATERNAL CARE:

Pregnant women with 3 or more prenatal visits – refers to pregnant women who had three or more prenatal visits such that at least one visit occurs during the first trimester, one during the second trimester and at least one during the last trimester.

Pregnant women given TT2 plus – refers to pregnant women given TT2 plus (TT2, TT3, TT4, TTL).

Pregnant women given Complete Iron dosage – refers to pregnant women given 4 months supply of ferrous sulfate or 250 tablets which is equivalent to 2 tablets daily starting at the 5th month of pregnancy.

Postpartum (PP) mothers with at least 1 PP visit - refers to postpartum women who were seen by the midwife/PHN/MD at home or at the clinic once or more than once a month after delivery.

Postpartum mothers given complete Iron dosage – refers to postpartum mothers given 2 tablets of ferrous sulfate daily for 2 months or 125 tablets after delivery.

Lactating mothers given Vitamin A – refers to lactating mothers given a single dose of vitamin A (200,000 IU/capsule) within one month from the date of delivery.

Women 15 – 49 years given iodized oil capsule – refers to women between ages 15-49 years old who were given iodized oil capsule. The dose is one capsule once a year.

FAMILY PLANNING:

New acceptors – refers to clients who are using a contraceptive method for the first time or new to the program. The FP method can be either be condom, injectables, IUD, LAM, NFP (which includes BBT, CM and symptothermal), pills, male sterilization (vasectomy), and female sterilization (tubal ligation).

Current users – refers to FP clients who have been carried over from the previous month after deducting the dropouts of the present month and adding the new acceptors of the previous month. Current users constitute specific FP methods used during the month which includes condom, injectables, IUD, LAM, NFP, pills, male sterilization and others. Changing clinic, changing method and restart are included under current users.

CHILD CARE:

Fully Immunized Children (9 – 11 mos.) – refers to children from 9 to 11 months old who have been given BCG, 3 doses of DPT and OPV and measles vaccine. The child is counted FIC as soon as all the required vaccines are administered without waiting for the child to reach 1 year of age.

Infant given 3rd dose of Hepa B – refers to infants given 3 doses of Hepatitis B vaccine before 1 year of age.

Infant seen at 4th month – refers to 4 months old infants seen.

Infants exclusively breastfed up to 4th month – refers to 4 month old infants who have been exclusively breastfed from birth up to 4th months. Exclusively breastfed infants are those with no other food or drink except breastmilk from birth to at least 4 months of age.

Diarrhea cases given ORS (0 – 59 months) – refers to 0 – 59 months old children with diarrhea who were given oresol.

Pneumonia cases seen (0 – 59 months) – refers to 0 – 59 months old children seen at the health facility for consultation due to pneumonia. Severe, very severe pneumonia and non-pneumonia are not included in this indicator.

Pneumonia cases given treatment (0 – 59 months) – refers to 0 – 59 months old children with pneumonia seen at the health facility and given cotrimoxazole.

Children (9 – 11 mos.) given vitamin A capsules – refers to children 9 to 11 months old who were given an annual dose of 100,000 IU of vitamin A capsules.

Children (12- 59 mos.) given vitamin A capsules – refers to children whose ages range from 12 to 59 months old who were given an annual dose of 200,000 IU of vitamin A capsules.

Moderately underweight children (6 – 59 months) – refers to moderately underweight children with ages 6 to 59 months newly identified during OPT and /or during actual weighing and/or referrals during the reporting month. Cases identified should be reported only once during the year.

Moderately underweight children(6-59 mos.) given food supplementation – New cases – refers to moderately underweight children whose ages range from 6 to 59 months who were initiated on food supplements.

Moderately underweight children (6-59mos) receiving food supplementation – refers to moderately underweight children whose ages range from 6 to 59 months who are being given follow-up food supplementation. Children who are 59 months old and not yet fully rehabilitated will still be included in the report.

Moderately underweight children (6-59 mos.) who were rehabilitated – refers to moderately underweight children whose ages range from 6 to 59 months who improved their nutritional status from moderately underweight to at least mildly underweight.

Severely underweight children (6-59 mos.) – refers to children 6-59 months old who were found to be severely underweight. Cases identified should only be reported once during the year.

Severely underweight children given food supplementation (6-59 mos.) (New) – refers to severely underweight children whose ages range 6 to 59 months identified during OPT and/or actual weighing and/or referrals who were initiated on food supplements.

Severely underweight children receiving food supplementation (6-59 mos.) – refers to severely underweight children whose ages range from 6 to 59 months who are given follow-up food supplementation.

Severely underweight children who were rehabilitated (6-59 mos.) – refers to severely underweight children whose ages range from 6 to 59 months whose nutritional status improved from severe to at least moderate.

DISEASE CONTROL:

LEPROSY:

New cases diagnosed – refers to cases identified either clinically or through positive skin biopsy. Include both multibacillary (MB) and paucibacillary (PB).

Completed Treatment (Tx) – refers to cases identified (MB and PB included) either clinically or through positive skin biopsy who have completed treatment. For MB, 24 blister packs should be completed within 36 months. For PB, 6 blister packs should be completed in 9 months.

Continuing Treatment – refers to cases (MB and PB) carried over during the previous year after adding new cases and subtracting those who completed treatment, those who were not followed up for one year and those who died.

MALARIA:

Confirmed Cases – refers to malaria cases identified through blood smear.

Clinically Diagnosed Cases – refers to malaria cases diagnosed without blood smear examination.

Given Treatment – refers to confirmed and clinically diagnosed malaria cases given antimalarial drugs.

TUBERCULOSIS:

TB symptomatics with sputum examination – refers to individuals with symptoms compatible to TB who had sputum examination.

New sputum positive cases initiated treatment – refers to new cases found positive through sputum examination and initiated anti-TB treatment. New cases refer to those who have never taken any anti-TB drugs or who have never taken more than one month of anti-TB drugs.

Old Sputum positive cases being re-treated – refers to individuals who were found positive through sputum examination before, were previously given treatment, found positive again and treatment has to be restarted. These include (1) relapsed cases (those who were previously treated, declared cured and after a period was again sputum positive), (2) treatment failure cases (those who remain sputum positive after at least five months of treatment) and (3) lost cases (those who have undergone at least two months of treatment, was lost for more than two months and found still sputum positive).

X-ray Positive cases initiated treatment – refers to individuals who have radiographic abnormalities consistent with active pulmonary tuberculosis and given anti-TB treatment.

SCHISTOSOMIASIS:

Examined – refers to stool examinations done.

Positive – refers to stool examinations that were found positive for schistosoma ova.

Given Treatment – refers to stool positive individuals who were given treatment for schistosomiasis.

RABIES:

Animal Bite Cases Seen – refers to persons who were bitten by animal (dogs, cats, and others).

Given Post Exposure Immunization – refers to persons given antirabies vaccines (active or passive immunization) after an animal bite.

FILARIASIS:

Cases – refers to filaria cases that were diagnosed either clinically or with laboratory confirmation. The case can either be microfilaria positive without symptoms, microfilaria positive with symptoms or microfilaria negative with major symptoms of swelling in inguinal, vulvar areas or lymphangitis.

Given Treatment – refers to identified cases given treatment for filariasis.

SEXUALLY TRANSMITTED DISEASES (STD):

With Vaginal Discharge – refers to women who consulted at the facility with clinical manifestation of vaginal discharge other than the normal. This also includes findings of cervicitis and/or vaginitis during routine family planning examinations.

With Urethral Discharge – refers to men who consulted at the facility because of abnormal urethral discharge.

With Genital Ulcers – refers to individuals who consulted because of genital ulcers.

DENTAL CARE:

Preschoolers provided curative treatment - refers to children with ages 2-5 years old who have been orally examined once or more during the year and were provided with one or more of the following for the year (a) temporary and/or permanent filling and /or (b) extraction of temporary teeth.

Schoolers provided preventive dental treatment – refers to 6-12 years old children who have been orally examined once or more during the year were provided with one or more of the following for the year: (a) scaling and polishing (b) weekly mouthrinsing or sodium fluoride and/or (c) pit and fissure sealant.

Schoolers provided curative dental treatment – refers to 6-12 years old children who have been orally examined once or more during the year and were provided one or more permanent filling of saveable teeth during the year.

Pregnant women given preventive dental treatment – refers to pregnant women who were orally examined once or more during the year and were provided one or more scaling and/or polishing services during the year.

Pregnant women given curative treatment – refers to pregnant women who were orally examined once or more times during the year and were provided one or more permanent filling and/or extraction during the year.

Other Adults given curative treatment – refers to other adults who were orally examined once or more during the year who were provided with one or more permanent filling and/or extraction during the year.

DEMOGRAPHIC INFORMATION:

Number of Health Workers in LGU – refers to nationally paid health workers and those hired by the local government. Health workers includes Doctors, Dentists, Nurses, Midwives, Nutritionist/Dietitian, Medical Technologist, Engineers/Sanitary Inspectors, Dental Aides, Active BHWs, Non-technical personnel and Trained Birth Attendants.

ENVIRONMENTAL:

Household with access to safe water – refers to households covered by or have access to the following types of drinking water sources that conform to the national standards for drinking water (i.e., free from bacterial, chemical, physical and other contaminants).

Level I (Point Source) – a protected well or a developed spring with an outlet but without a distribution system, generally adaptable for rural areas where the houses are thinly scattered. A Level I facility normally serves an average of 15 households.

Level II (Communal Faucet System or Standpost) – A system composed of a source, a reservoir, a piped distribution network and communal faucets. Usually one faucet serves 4 to 6 households. Generally suitable for rural and urban areas where houses are clustered densely to justify a simple piped system.

Level III (Waterworks System or Individual House Connection) – A system with a source, a reservoir, a piped distribution network and household taps. It is generally suited for densely populated urban areas.

Households with sanitary toilets – refers to households with flush and pour flush toilets, sanitary pit privy, other types of sanitary toilet facilities such as aqua-privy, ventilated improved pit or chemical toilet.

Households with satisfactory garbage disposal – refers to households with garbage disposal through composting/burying or through municipal/city collection (Burning and open dumping are not included under satisfactory garbage disposal).

Households with Complete Basic Sanitation Facilities – refers to households which satisfy the presence of the following basic sanitation elements, namely: access to safe water, availability of a sanitary toilet, satisfactory system of garbage disposal.

Food Establishments – these includes hotels, restaurants, sari-sari stores, canteens, carinderias, refreshment parlor, night clubs, bakeries, food manufacturing, bottling, dairy and canning establishments.
