FOREWORD

The 1997 Field Health Service Information System (FHSIS) Annual Report is a nationwide compilation of data from health facilities collected through the provincial and regional health offices. This consists of selected health indicators reflective of health care delivery by field health workers from the barangay health stations (BHS), rural health units (RHU) and district hospitals nationwide.

Data on specific public health programs such as Family Planning, Maternal and Child Health, Expanded Program on Immunization, Communicable Disease Control, Dental Health and statistics on natality, morbidity and mortality are presented by province, city and region. These data are intended to be utilized by managers at the national level and local government officials for planning, monitoring and evaluating health activities.

However, there are limitations in this report. Some municipalities, provinces and cities have not submitted their FHSIS reports. Furthermore, these data are outputs coming from the field health units and as such, do not include data from hospital service deliveries as well as hospital health statistics. Both are necessary to come up with a more complete picture of health care delivery and an accurate health situation of the country.

This report would not be possible without the support of people from the Local Government Units and the DOH-Regional Health Offices. Thank you for your continued support.

1997 FHSIS REPORT

HEALTH STATUS

1. Population

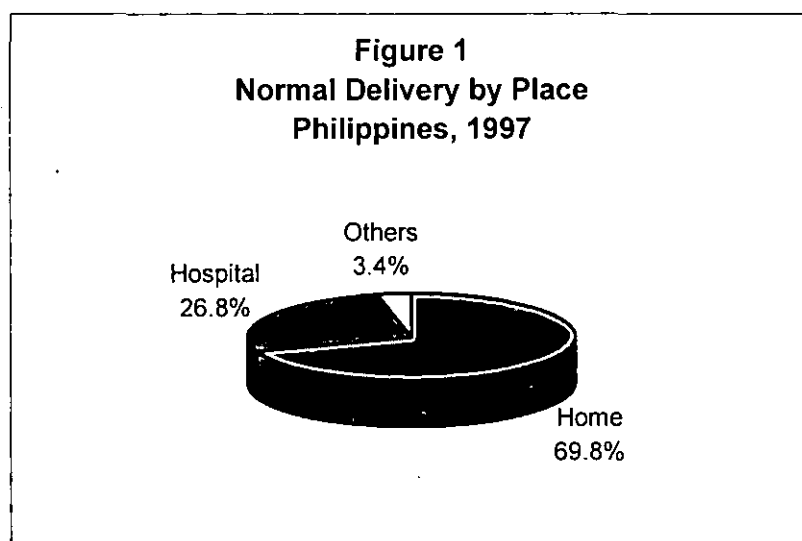

The Philippine population for 1997 is estimated to be 71,963,636. Among the 16 regional population, NCR and Region 4 have the highest population while CARAGA and ARMM have the lowest population. There are around 12,330,052 households.

Health workers who are responsible for the delivery of health care service at the local level include: active BHWs (169,500); trained birth attendants (34,509); midwives (15,606); nurses (4,881); engineers/sanitary inspectors (3,511); doctors (3,121); non-technical personnel (2,666); dentists (1,782); medical technologists (1,187); dental aides (930) and nutritionist (377).

2. Births

Reports from field health services have shown a total of 1,578,893 livebirths in 1997. Forty nine percent were male and 47% were female while the rest of the reports, did not specified the gender. Livebirths with weight of 2,500 grams and more at birth constitute 77.4% which finding is lower than in 1996 by 4 percent.

The midwives have remained as the major assistants at birth (41.5%) followed by doctors (25%) and the trained hilots (23.3%). Those delivered by untrained hilots have increased by 1% compared to 1996. Ninety nine percent of the reported livebirths were delivered normally. Seventy percent of these normal deliveries were in the homes, 27% in the hospitals while 3% were in places other than home or hospital. (Figure 1)

Of the total pregnancies, 58.7% were normal, 21.8% were considered as risk pregnancy and the rest, 19.6% were of undetermined status.

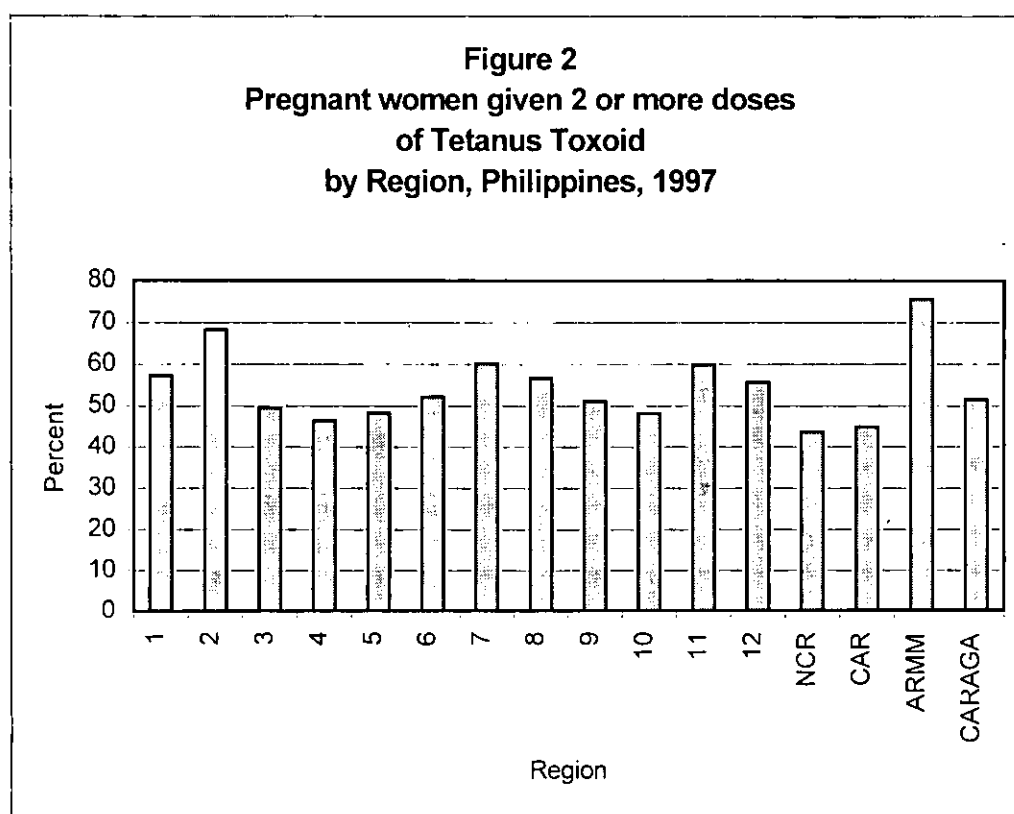

3. Mortality

Field health reports showed a total of 266,350 deaths in 1997. Of the total deaths, 58% were male and 42% were female. Of the total livebirths, 13.3 per 1000 livebirth were infant deaths; 0.6 per 1000 livebirths were maternal deaths; 0.3 per 1000 livebirths were deaths due to neonatal tetanus and 3.8 per 1000 livebirths were stillbirths.

HEALTH PROGRAMS:

1. Maternal and Child Health

In 1997, 62.2% of women had 3 or more prenatal visits in health centers which finding is 6-percentage point higher than in 1996. Regions 1, ARMM and 2 have reported the highest at 75.9%, 73.5% and 73.3%, respectively. Tetanus toxoid plus coverage among pregnant women has remained low at 52.2%. (Figure 2)

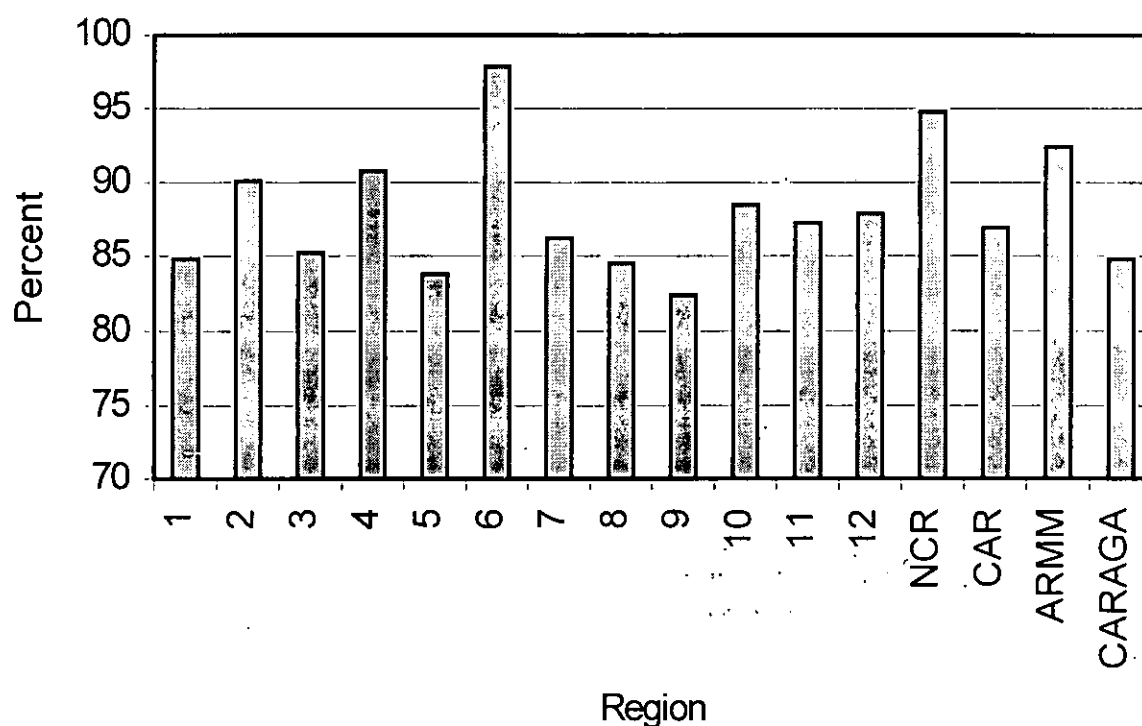

Seventy percent of the targeted population had at least one postpartum visit either at the public health facilities or at home.

2. Expanded Program on Immunization and Breastfeeding

Of the targeted population of 2,158,818 in 1997, 88.9% were fully immunized children by 9-11 months old which report showed no significance difference from last year coverage. Region 6 reported the highest coverage with 97.9% while Region 9 registered the lowest with 82.4%. (Figure 3).

Figure 3
Fully Immunized Coverage
by Province, Philippines, 1997

Only thirty seven percent of infants were given 3 doses of Hepatitis B which finding is significantly lower compared to last year's 62% coverage among infants.

There were 1,563,500 infants seen at fourth month of age. Eighty six percent of whom were exclusively breastfed, which means that no other food, or drink except breastmilk from birth to at least 4 months of age was given.

3. Control of Diarrhea Diseases & Acute Respiratory Infection

In 1997, 2,921,600 children aged 0-59 months old were expected to be seen with diarrhea at health facilities (RHUs & BHSs). Of this eligible population only 31.6% were given ORS.

One million forty three thousand four hundred twenty nine children aged 0-59 months old were expected to be seen at field health facilities to develop pneumonia. Ninety one percent of those identified to have pneumonia were given antibiotic treatment.

4. Nutrition

A total of 861,556 moderately underweight children 6-59 months old were registered in 1997, around 15% were initiated with food supplementation while 15.9% were being given follow-up food supplementation. Only 10.1% were rehabilitated.

There were 143,967 children 0-59 months identified to be severely underweight children. Twenty one percent were initiated food supplementation and 21.5% were given follow-up. Seventeen percent were rehabilitated.

Complete iron supplementation was provided to only 46.9% of the targeted pregnant women and 42.2% postpartum mothers. Region 2 reported the highest (63.5%) of pregnant women given complete iron dosage while Region 11 reported the lowest coverage (28.4%).

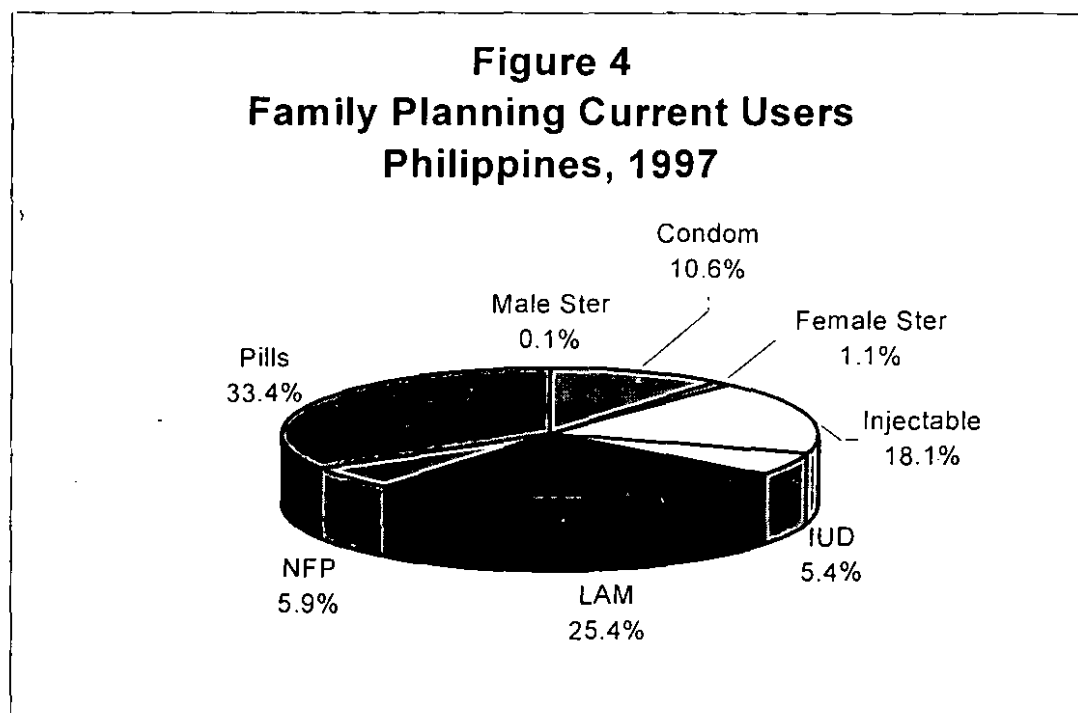

Among the childbearing age women 15-49 years of age only 17.3% were given iodine supplements.

Vitamin A was given to 49.8% lactating mothers, 71.6% of children 9-11 months old and 93.2% of children 12-59 months old.

5. Family Planning

The new acceptors of family planning that were recruited in 1997 have totaled to 1,168,770. Among the methods were: pills (33.4%), LAM (25.4%), injectable (18.1%), condom (10.6%), natural family planning method (5.9%), IUD (5.4%), female sterilization (1.1%) and male sterilization (0.1%).

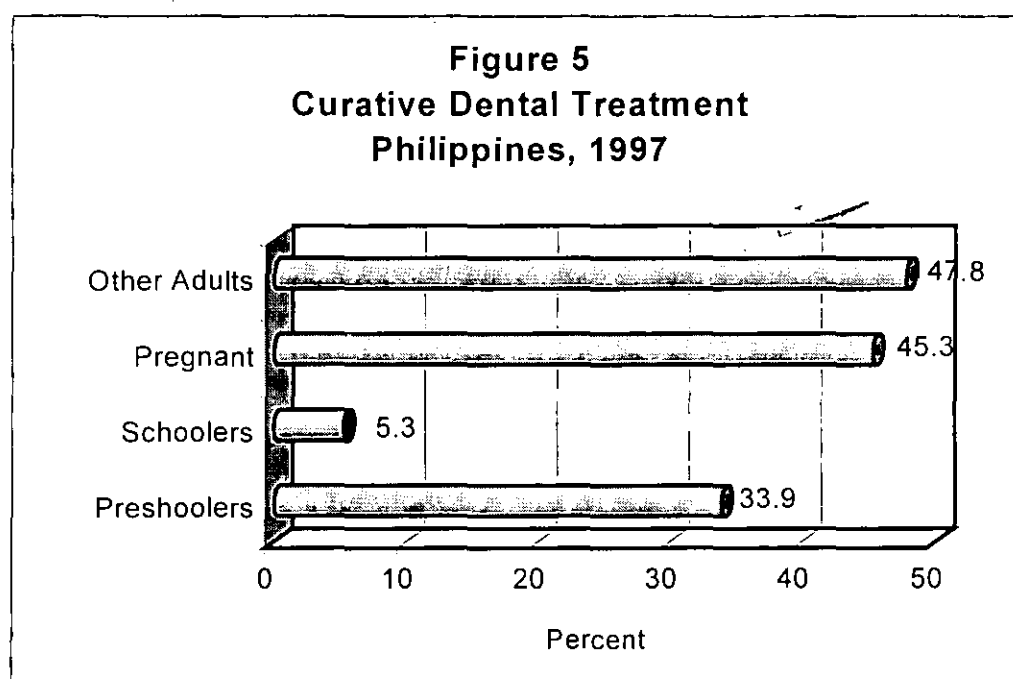

A total of 4,057,688 current users of family planning method are registered in the local health facilities in 1997. Majority of these family planning clients still prefers to use the pill. The use of condom and injectable remains second and third compared to other methods. (Figure 4)

6. Dental Health Program

Curative and preventive dental treatments are priority activities in dental health care.

Curative care prioritizes schoolers, preschoolers, pregnant women and other adults. For preschoolers curative treatment consists of temporary/permanent filling or extraction. In 1997, 33.9% of preschoolers were provided curative treatment. Among pregnant women, 45.3% have had permanent filling/extraction as form of curative treatment while other adults covered 47.8%. Only 5.3% schoolers were covered for curative treatment. (Figure 50

Preventive dental treatment focuses mainly on 2 groups – the schoolers and the pregnant women. For 1997, 156.4% schoolers were provided either scaling, polishing, mouthrinsing with sodium fluoride and pit and fissure sealant. Only 60.1% of pregnant women were provided scaling/polishing as form of preventive treatment.

7. Disease Control Program

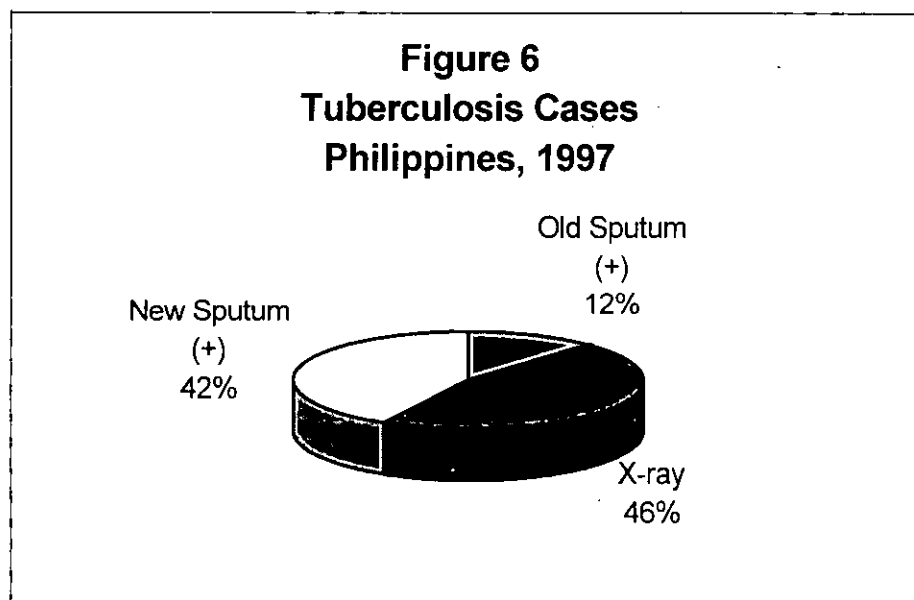

*Field health report on **Leprosy Control** activity shows that 5,265 new cases were diagnosed in 1997. Eight thousand one hundred fifty one cases were continuing treatment and only 3,107 cases completed treatment.*

*The implementation of the **Schistosomiasis Control** Program in 1997, 262,103 stools were examined. Only 5.2% were found to be positive. Among the stools examined, 97.4% were given treatment.*

Rabies Control Program implementation in RHUs and BHSs shows that 60,788 had animal bites of which only 39% were given post exposure examination.

Filariasis Control Program: there were 2,351 filariasis cases identified in 1997 and only 67.8% were given treatment.

Activities related **Tuberculosis Control Program** show that of 199,665 cases were found to be positive for tuberculosis. Around forty six percent were x-ray positive, 41.5% were new sputum positive, and only 11.9% were old sputum positive (Figure 6).

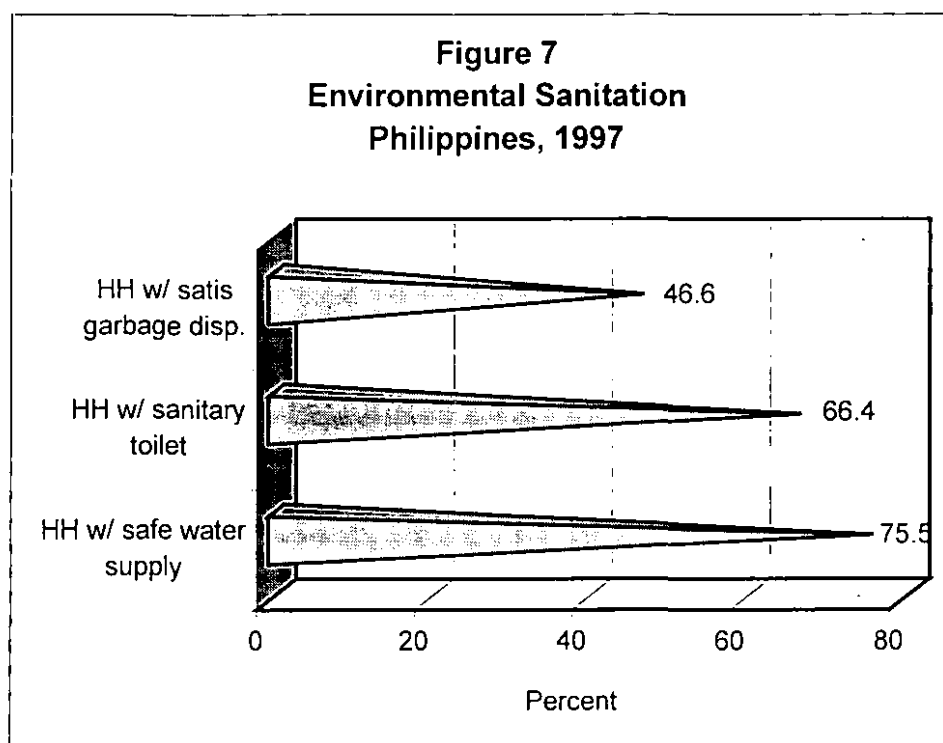

Malaria Control Program: A total of 282,804 cases were clinically diagnosed to have malaria. And out of these, 54,355 cases were confirmed. Eighty eight percent of those clinically diagnosed were given treatment.

Sexually Transmitted Disease Program, emphasizes the syndromic reporting which shows that 0.2% or 28,172 were reported to have abnormal vaginal discharge, 5,357 males had urethral discharge and 960 individuals were found to have genital ulcers.

8. Environmental Health Program

There were 12,330,052 households in the Philippines in 1997. Households with access to safe water supply were reported to be around 9 million or 75.5%. Of these, 34.3% or 4,233,630 are categorized as Level I, 11.5% or 1,416,005 are Level II and 29.7% or 3,664,678 are Level III. On the other hand, only 66.4% households have sanitary toilet and 46.6% have satisfactory garbage disposal. Households with complete sanitation facilities registered 41.5% or 5,112,338 (Figure 7)

Of the food establishments reported, only 368,515 or 74% had sanitary permits.

A total of 881,775 food handlers were reported of which 90.3% were given health certificates.

DEFINITION OF TERMS

MATERNAL CARE:

Pregnant women with 3 or more prenatal visits – refers to pregnant women who had three or more prenatal visits such that at least one visit occurs during the first trimester, one during the second trimester and at least one during the last trimester.

Pregnant women given TT2 plus – refers to pregnant women given TT2 plus (TT2, TT3, TT4, TTL).

Pregnant women given Complete Iron dosage – refers to pregnant women given 4 months supply of ferrous sulfate or 250 tablets which is equivalent to 2 tablets daily starting at the 5th month of pregnancy.

Postpartum (PP) mothers with at least 1 PP visit – refers to postpartum women who were seen by the midwife/PHN/MD at home or at the clinic once or more than once a month after delivery.

Postpartum mothers given complete Iron dosage – refers to postpartum mothers given 2 tablets of ferrous sulfate daily for 2 months or 125 tablets after delivery.

Lactating mothers given Vitamin A – refers to lactating mothers given a single dose of vitamin A (200,000 IU/capsule) within one month from the date of delivery.

Women 15 – 49 years given iodized oil capsule – refers to women between ages 15-49 years old who were given iodized oil capsule. The dose is one capsule once a year.

FAMILY PLANNING:

New acceptors – refers to clients who are using a contraceptive method for the first time or new to the program. The FP method can be either be condom, injectables, IUD, LAM, NFP (which includes BBT, CM and symptothermal), pills, male sterilization (vasectomy), and female sterilization (tubal ligation).

Current users – refers to FP clients who have been carried over from the previous month after deducting the dropouts of the present month and adding the new acceptors of the previous month. Current users constitute specific FP methods used during the month which includes condom, injectables, IUD, LAM, NFP, pills, male sterilization and others. Changing clinic, changing method and restart are included under current users.

CHILD CARE:

Fully Immunized Children (9 – 11 mos.) – refers to children from 9 to 11 months old who have been given BCG, 3 doses of DPT and OPV and measles vaccine. The child is counted FIC as soon as all the required vaccines are administered without waiting for the child to reach 1 year of age.

Infant given 3rd dose of Hepa B – refers to infants given 3 doses of Hepatitis B vaccine before 1 year of age.

Infant seen at 4th month – refers to 4 months old infants seen.

Infants exclusively breastfed up to 4th month – refers to 4 month old infants who have been exclusively breastfed from birth up to 4th months. Exclusively breastfed infants are those with no other food or drink except breastmilk from birth to at least 4 months of age.

Diarrhea cases given ORS (0 – 59 months) – refers to 0 – 59 months old children with diarrhea who were given oresol.

Pneumonia cases seen (0 – 59 months) – refers to 0 – 59 months old children seen at the health facility for consultation due to pneumonia. Severe, very severe pneumonia and non-pneumonia are not included in this indicator.

Pneumonia cases given treatment (0 – 59 months) – refers to 0 – 59 months old children with pneumonia seen at the health facility and given cotrimoxazole.

Children (9 – 11 mos.) given vitamin A capsules – refers to children 9 to 11 months old who were given an annual dose of 100,000 IU of vitamin A capsules.

Children (12– 59 mos.) given vitamin A capsules – refers to children whose ages range from 12 to 59 months old who were given an annual dose of 200,000 IU of vitamin A capsules.

Moderately underweight children (6 – 59 months) – refers to moderately underweight children with ages 6 to 59 months newly identified during OPT and /or during actual weighing and/or referrals during the reporting month. Cases identified should be reported only once during the year.

Moderately underweight children(6–59 mos,) given food supplementation – New cases – refers to moderately underweight children whose ages range from 6 to 59 months who were initiated on food supplements.

Moderately underweight children (6–59mos) receiving food supplementation – refers to moderately underweight children whose ages range from 6 to 59 months who are being given follow-up food supplementation. Children who are 59 months old and not yet fully rehabilitated will still be included in the report.

Moderately underweight children (6–59 mos.) who were rehabilitated – refers to moderately underweight children whose ages range from 6 to 59 months who improved their nutritional status from moderately underweight to at least mildly underweight.

Severely underweight children (6–59 mos.) – refers to children 6–59 months old who were found to be severely underweight. Cases identified should only be reported once during the year.

Severely underweight children given food supplementation (6–59 mos.) (New) – refers to severely underweight children whose ages range 6 to 59 months identified during OPT and/or actual weighing and/or referrals who were initiated on food supplements.

Severely underweight children receiving food supplementation (6–59 mos.) – refers to severely underweight children whose ages range from 6 to 59 months who are given follow-up food supplementation.

Severely underweight children who were rehabilitated (6–59 mos.) – refers to severely underweight children whose ages range from 6 to 59 months whose nutritional status improved from severe to at least moderate.

DISEASE CONTROL:

LEPROSY:

New cases diagnosed – refers to cases identified either clinically or through positive skin biopsy. Include both multibacillary (MB) and paucibacillary (PB).

Completed Treatment (Tx) – refers to cases identified (MB and PB included) either clinically or through positive skin biopsy who have completed treatment. For MB, 24 blister packs should be completed within 36 months. For PB, 6 blister packs should be completed in 9 months.

Continuing Treatment – refers to cases (MB and PB) carried over during the previous year after adding new cases and subtracting those who completed treatment, those who were not followed up for one year and those who died.

MALARIA:

Confirmed Cases – refers to malaria cases identified through blood smear.

Clinically Diagnosed Cases – refers to malaria cases diagnosed without blood smear examination.

Given Treatment – refers to confirmed and clinically diagnosed malaria cases given antimalarial drugs.

TUBERCULOSIS:

TB symptomatics with sputum examination – refers to individuals with symptoms compatible to TB who had sputum examination.

New sputum positive cases initiated treatment – refers to new cases found positive through sputum examination and initiated anti-TB treatment. New cases refer to those who have never taken any anti-TB drugs or who have never taken more than one month of anti-TB drugs.

Old Sputum positive cases being re-treated – refers to individuals who were found positive through sputum examination before, were previously given treatment, found positive again and treatment has to be restarted. These include (1) relapsed cases (those who were previously treated, declared cured and after a period was again sputum positive), (2) treatment failure cases (those who remain sputum positive after at least five months of treatment) and (3) lost cases (those who have undergone at least two months of treatment, was lost for more than two months and found still sputum positive).

X-ray Positive cases initiated treatment – refers to individuals who have radiographic abnormalities consistent with active pulmonary tuberculosis and given anti-TB treatment.

SCHISTOSOMIASIS:

Examined – refers to stool examinations done.

Positive – refers to stool examinations that were found positive for schistosoma ova.

Given Treatment – refers to stool positive individuals who were given treatment for schistosomiasis.

RABIES:

Animal Bite Cases Seen – refers to persons who were bitten by animal (dogs, cats, and others).

Given Post Exposure Immunization – refers to persons given antirabies vaccines (active or passive immunization) after an animal bite.

FILARIASIS:

Cases – refers to filaria cases that were diagnosed either clinically or with laboratory confirmation. The case can either be microfilaria positive without symptoms, microfilaria positive with symptoms or microfilaria negative with major symptoms of swelling in inguinal, vulvar areas or lymphangitis.

Given Treatment – refers to identified cases given treatment for filariasis.

SEXUALLY TRANSMITTED DISEASES (STD):

With Vaginal Discharge – refers to women who consulted at the facility with clinical manifestation of vaginal discharge other than the normal. This also includes findings of cervicitis and/or vaginitis during routine family planning examinations.

With Urethral Discharge – refers to men who consulted at the facility because of abnormal urethral discharge.

With Genital Ulcers – refers to individuals who consulted because of genital ulcers.

DENTAL CARE:

Preschoolers provided curative treatment - refers to children with ages 2-5 years old who have been orally examined once or more during the year and were provided with one or more of the following for the year (a) temporary and/or permanent filling and /or (b) extraction of temporary teeth.

Schoolers provided preventive dental treatment – refers to 6-12 years old children who have been orally examined once or more during the year were provided with one or more of the following for the year: (a) scaling and polishing (b) weekly mouthrinsing or sodium fluoride and/or (c) pit and fissure sealant.

Schoolers provided curative dental treatment – refers to 6-12 years old children who have been orally examined once or more during the year and were provided one or more permanent filling of saveable teeth during the year.

Pregnant women given preventive dental treatment – refers to pregnant women who were orally examined once or more during the year and were provided one or more scaling and/or polishing services during the year.

Pregnant women given curative treatment – refers to pregnant women who were orally examined once or more times during the year and were provided one or more permanent filling and/or extraction during the year.

Other Adults given curative treatment – refers to other adults who were orally examined once or more during the year who were provided with one or more permanent filling and/or extraction during the year.

DEMOGRAPHIC INFORMATION:

Number of Health Workers in LGU – refers to nationally paid health workers and those hired by the local government. Health workers includes Doctors, Dentists, Nurses, Midwives, Nutritionist/Dietitian, Medical Technologist, Engineers/Sanitary Inspectors, Dental Aides, Active BHWs, Non-technical personnel and Trained Birth Attendants.

ENVIRONMENTAL:

Household with access to safe water – refers to households covered by or have access to the following types of drinking water sources that conform to the national standards for drinking water (i.e., free from bacterial, chemical, physical and other contaminants).

Level I (Point Source) – a protected well or a developed spring with an outlet but without a distribution system, generally adaptable for rural areas where the houses are thinly scattered. A Level I facility normally serves an average of 15 households.

Level II (Communal Faucet System or Standpost) – A system composed of a source, a reservoir, a piped distribution network and communal faucets. Usually one faucet serves 4 to 6 households. Generally suitable for rural and urban areas where houses are clustered densely to justify a simple piped system.

Level III (Waterworks System or Individual House Connection) – A system with a source, a reservoir, a piped distribution network and household taps. It is generally suited for densely populated urban areas.

Households with sanitary toilets – refers to households with flush and pour flush toilets, sanitary pit privy, other types of sanitary toilet facilities such as aqua-privy, ventilated improved pit or chemical toilet.

Households with satisfactory garbage disposal – refers to households with garbage disposal through composting/burying or through municipal/city collection (Burning and open dumping are not included under satisfactory garbage disposal).

Households with Complete Basic Sanitation Facilities – refers to households which satisfy the presence of the following basic sanitation elements, namely: access to safe water, availability of a sanitary toilet, satisfactory system of garbage disposal.

Food Establishments – these includes hotels, restaurants, sari-sari stores, canteens, carinderias, refreshment parlor, night clubs, bakeries, food manufacturing, bottling, dairy and canning establishments.

Food Establishments with Sanitary Permit – refers to food establishments that have been issued sanitary permits.

Food Handlers – refers to food handlers employed in food establishments.
