FOREWORD

The 2003 Report of the Field Health Service Information System (FHSIS) is a documentation report that provides information on the different public health programs.

These accomplishments reflect the collaborative efforts of the Local Government Units (LGUs), Non-Government Organizations and the Department of Health.

The FHSIS data is a tool to guide policy makers and managers in planning and assessing health activities both at the local and national levels.

The dedication and usual support of our frontline health workers both in urban and rural areas in providing health and health-related services to our constituents are acknowledged and highly appreciated.

Moreover, we also express our sincerest gratitude to all the staff at the regional, provincial and city health offices, whose dedication and commitment have contributed to the realization of this Annual Report.

FRANCISCO T. DUQUE III, MD, MSc

1. HEALTH STATUS

1.1 Population

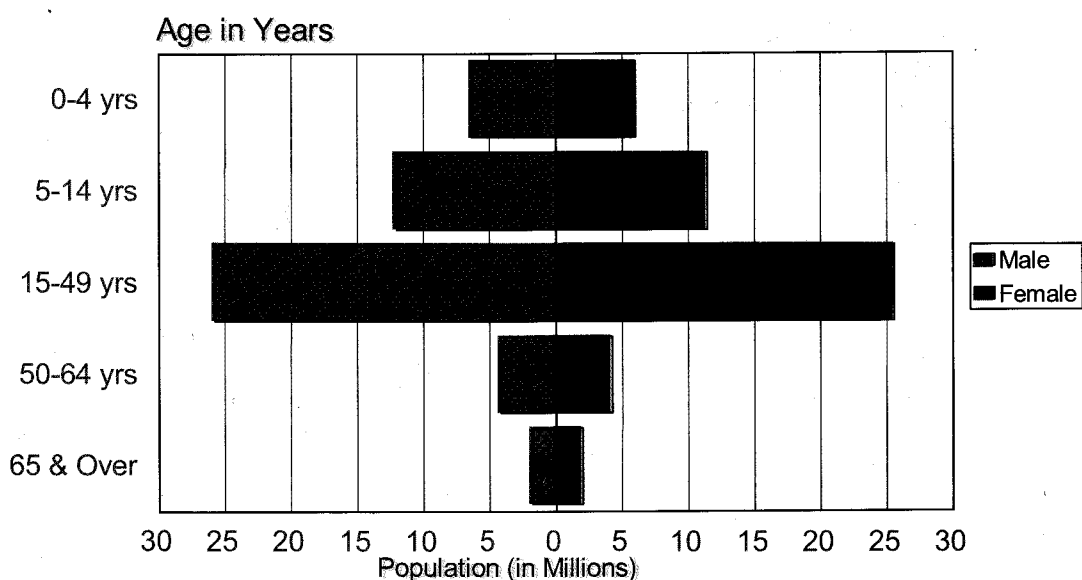

The 1995 census conducted by the National Statistics Office (NSO) projected the Philippine's 2003 population as 81,081,457.

Of the total population 40,820,706 were males and 40,260,751 were females. About 28,096,522 or 35% belongs to age group less than 15 years old and 42,245,087 or 52% belongs to the productive age group or 15-64 years old. The remaining 10,739,848 or 13% constitute the older age group (50-65 years old and over).

1.2 Health Statistics

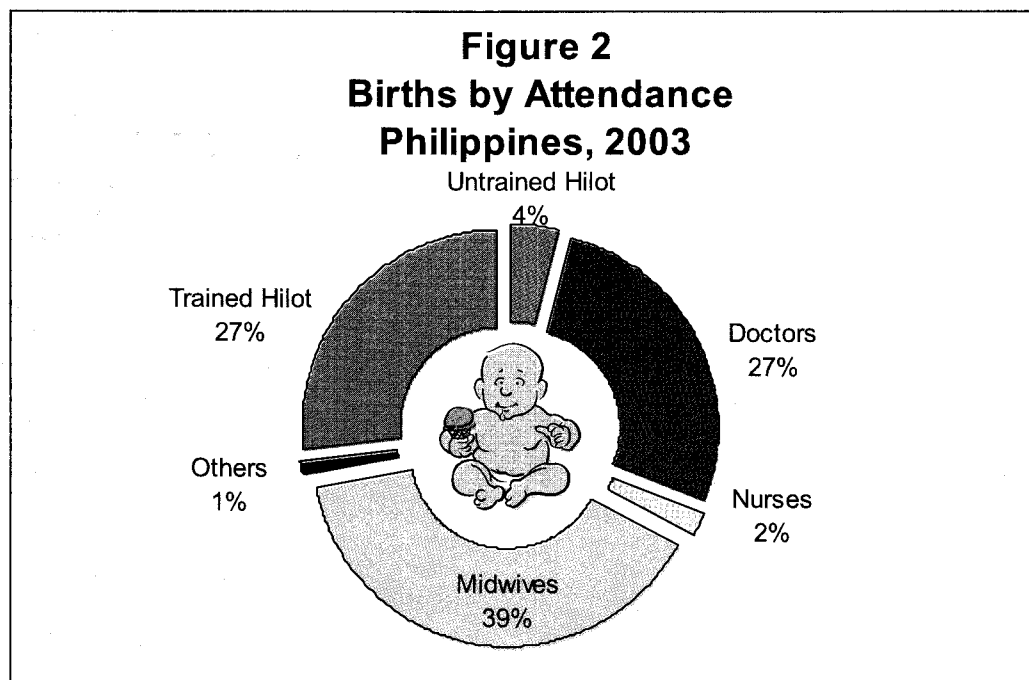

1.2.1 *Natality*

Of the 1,681,375 registered livebirths, 863,764 (51%) were males and 817,611 (49%) were females. It further showed that a total of 1,431,305 (85%) have a birthweight of 2,500 grams and above. Region 3 reported the highest number (25,624) of infants born with birthweight less than 2,500 grams.

As to place of delivery, 1,123,161 (67%) were delivered at home; while 453,018 (27%) were delivered in hospitals or medical clinics. Almost all (63%) were normal pregnancies.

Of the total pregnancies, 63% were normal, 25% were risk pregnancy while the rest (12%) were of undetermined status. CARAGA Region reported the highest number (37%) of risk pregnancy while the National Capital Region reported the lowest number (13%) of risk pregnancy.

As to birth attendance, trained health personnel (doctors, nurses, midwives and trained hilots) handled about 95% of the total registered births; 4% were handled by untrained hilots and the remaining 1% were delivered by persons of unknown delivery training status.

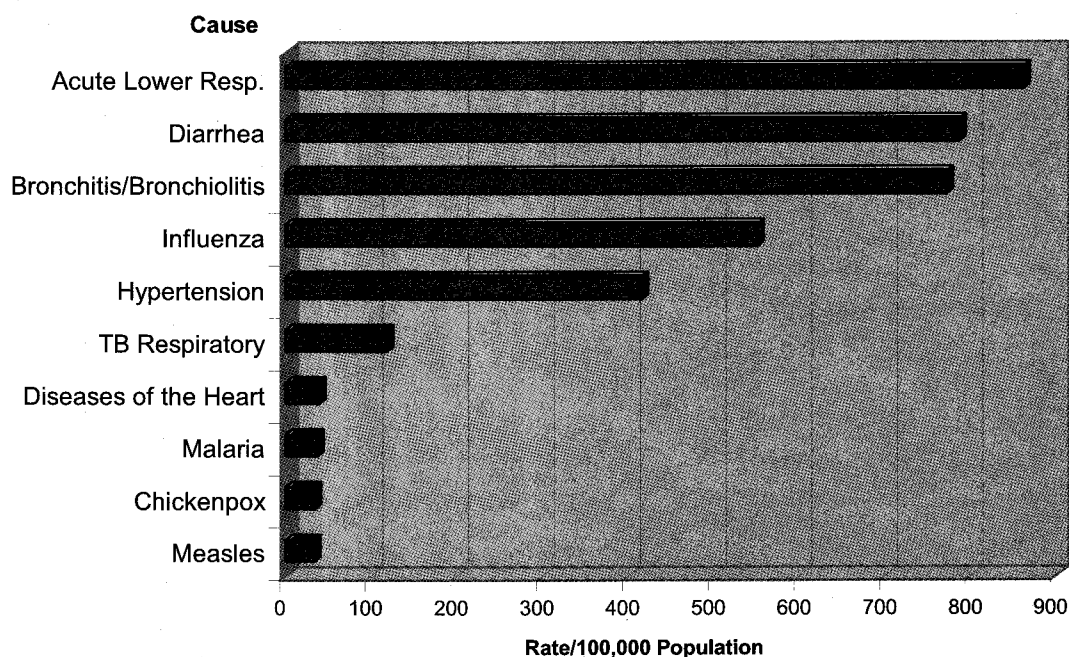

1.2.2 Morbidity

Diarrhea continues to be the leading cause of morbidity. Rounding up the top leading causes of morbidity are: bronchitis/bronchiolitis, pneumonia, influenza, hypertension, acute lower respiratory tract infection and pneumonia, TB respiratory, diseases of the heart, malaria, and chickenpox.

1.2.3 Mortality

In 2003, there were 325,768 registered deaths. Of these, 56% were male and 40% were female.

Infant Mortality Rate (IMR) which specifically measures the risk of dying among infants less than one year of age, was registered at 10.2 per thousand livebirths or 17,231 infant deaths.

Maternal Mortality Rate (MMR), which measures mortality among pregnant mothers, has 0.7 per thousand livebirths. However neonatal deaths registered 209 or 0.1 per thousand livebirths.

1.2.4 Health Facilities & Manpower

There are 15,605 barangay health stations strategically located in the different municipalities and barangays.

Running the rural health units are 3,064 rural health physicians; 4,735 public health nurses, 17,196 rural health midwives; 3,145 engineers/rural sanitary inspectors and 1,946 rural health dentists, with population ratio of 1:26,463; 1:17,124; 1:4,715; 1:25,781 and 1:41,666 respectively. Other local health manpower comprised of 296 nutritionist, 1,598 medical technologist, 1,006 dental aides, and 4,762 non-technical staff. This manpower manned the health centers and are assisted by 202,314 barangay health workers and 49,488 birth attendants.

Health manpower is inadequate to answer the needs of the populace. There is also rapid turnover of personnel, particularly doctors and nurses who prefer to go abroad or work in urban hospitals.

2 HEALTH PROGRAMS

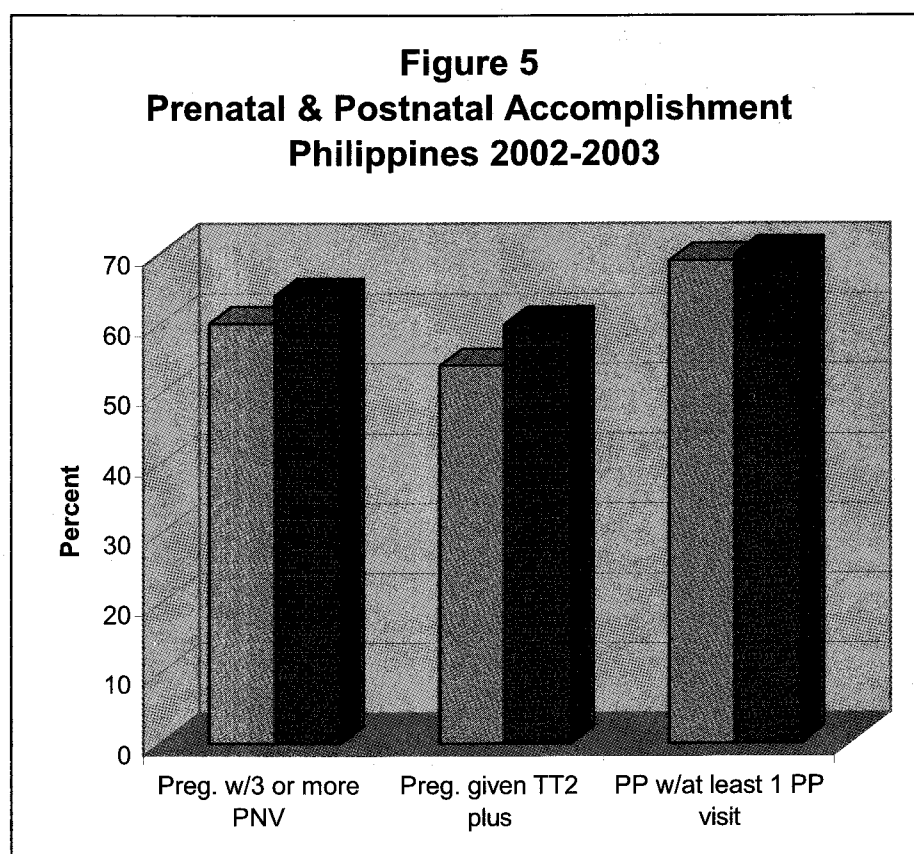

2.1 Maternal Care Program

Pregnancy is a normal physiologic process that has certain risk. If left unattended, the mother may suffer complications and may lead eventually to death. These conditions are preventable with quality health care, early detection and appropriate management of high-risk conditions, competent service providers and adequate and timely referral system.

Of the 2,837,851 expectant mothers in the year 2003, only 64% had quality prenatal visit.

With regards to Tetanus Toxoid immunization, only 60% of pregnant mothers received this immunization.

Post natal visits either at home or in a clinic reached 70%, with Region 4A (Calabarzon) having served the most, (82%) of its target.

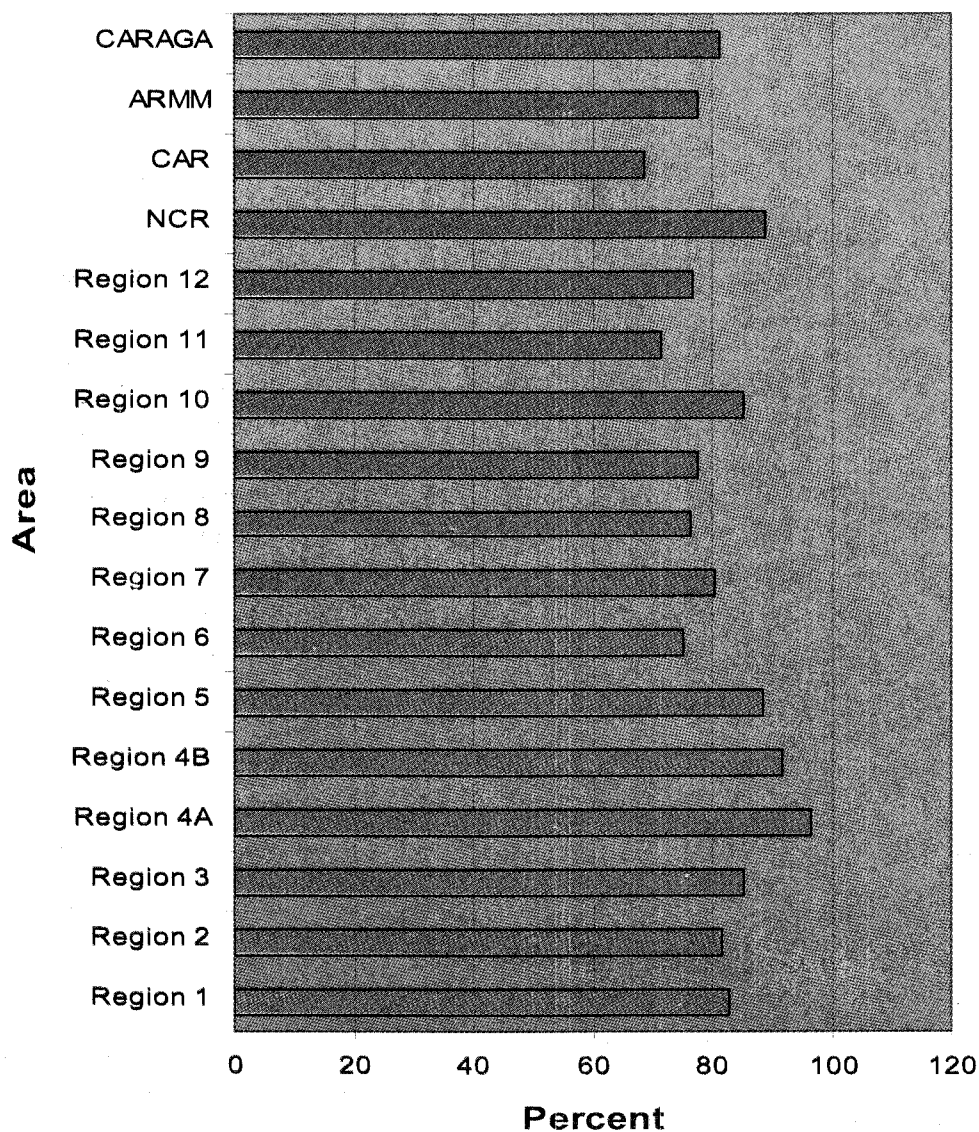

A slight increase in prenatal and postnatal accomplishment can be noted compared to last year's data . (Figure 5)

2.2 Expanded Program on Immunization

Fully Immunized Children was 84% in 2003 compared to 77% in 2002. This represents a total of 2,035,145 out of 2,432,444 eligible children immunized before reaching one year of age. Region 4A (Calabarzon) has covered the most number of children less than 1 year old with an accomplishment of 96%, while Cordillera Administrative Region had the least with 68% immunization coverage.

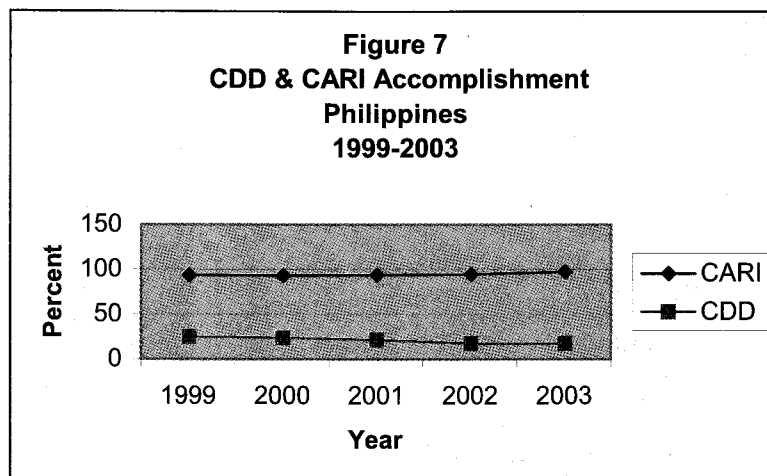

As per individual antigen, Region 5 registered the most number of children given Measles, DPT1-3, OPV1-3 and Hepatitis B1-3 vaccine.

Figure 6
Fully Immunized Children
by Region, Philippines 2003

2.3 Control of Diarrheal Diseases (CDD) & Control of Acute Respiratory Infection (CARI)

Diarrhea remains a leading cause of morbidity. The Control of Diarrheal Disease Program aims to reduce morbidity and mortality from diarrhea. The primary intervention for reducing death among young children is oral rehydration therapy which means increasing fluids and continuing feeding to prevent dehydration caused by diarrhea. Acceptable fluids include oresol and home fluids like rice water, soup, coconut water and fresh fruit juices.

In 2003, 587,093 or 18% of the expected 3,291,907 diarrhea cases among children under five years old were given oresol.

For the Control of Acute Respiratory Infection Program, the most important health care goal is pneumonia mortality reduction among young children. Pneumonia deaths can be prevented through early recognition and good access to necessary antibiotics, life saving-oxygen and good quality health care. Pneumonia is a common cause of death in children especially those below 5 years of age.

In 2003, there were 559,434 reported pneumonia cases among children under 5 years old. Of these 544,099 or 97% were given treatment.

2.4. Nutrition Report

The virtual elimination of Vitamin A and Iodine Deficiency Disorder is a priority thrust of the Department of Health. Strategies towards the attainment of this goal include universal Vitamin A supplementation and the iodization of salt.

Vitamin A were provided to 90% of children 9 to 11 mos., 106% to children 12-59 months and only 62% to lactating mothers. It will be noted that there was a increase in the provision of Vit. A compared to previous years.

On the other hand, a decrease in the number of iodized oil coverage was noted. Only 2% of women aged 15-49 years were provided with iodized oil capsules

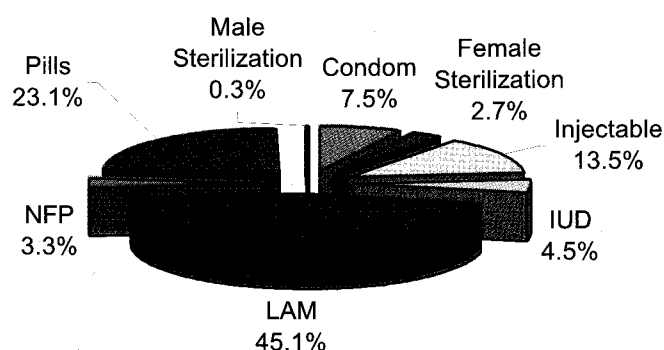

2.5 Family Planning

The Philippines has a total population of 81,081,457. Of these, 26% or 21,015,784 are women of reproductive age.

In year 2003, field health workers were able to recruit 1,397,167 new acceptors. Majority preferred Lactational Amenorrhea Method (LAM) (45% or 630,332), followed by pills (23% or 322,737), injectable (13% or 188,531), condom (7% or 104,307), IUD (4% or 62,485), natural family planning method (3% or 46,678), female and male sterilization (3% or 37,704 and 0.3% or 4,393) respectively.

On the other hand, a total of 4,218,886 current users of family planning were registered for year 2003. Pill still remains the number one choice, injectable has been the next choice and IUD is the third choice.

2.6 Dental Health Report

Dental Health catered to all age groups namely the pre-natal, pre-schoolers, school children and other adults. There are 1,946 dentists paid by local government serving the whole population.

Dental Health Program has provided curative treatment to 622,931 (28%) of the pre-schoolers; 1,057,748 (5%) of the schoolers; 336,748 (35%) of the pregnant women and 1,970,567 (43%) other adults. Curative treatment consists of temporary and/or permanent filling and extraction of temporary teeth

Figure 10
Curative Dental Treatment
Philippines 2002 vs. 2003

2.7 National Tuberculosis Program

Inspite of the fact that tuberculosis is curable, there still an increasing number of patient suffering from this disease.

Data revealed that new sputum positive initiated treatment by the local health unit is 86.3 per 100,000 population. Total TB cases registered was 158 per 100,000 population which consists of new sputum positive initiated treatment, old sputum positive being re-treated and x-ray positive initiated treatment.

2.9 Environmental Health Sanitation

Water is a vital natural resource. An adequate and safe water supply is essential for daily life function, such as drinking, food preparation, personal hygiene and sanitation.

Only 82% of the total households have access to safe water. Sanitary toilet facilities remains a problem with only 74% of the total households have access to sanitary toilets. CARAGA Region had the highest percentage of access to safe water while Region 3 had the lowest with 70.2%. (Figure 11).
