## TRENDS IN THE PHILIPPINES

A total of **138** pertussis cases were reported nationwide from January 1 – July 1, 2017. This is **20% lower** than the same period last year (172 cases). Figure 1 shows the distribution of the reported pertussis cases in the country by morbidity week.

## GEOGRAPHIC DISTRIBUTION

The number of pertussis cases varies by region. Figure 2 shows the distribution of reported pertussis cases by region in comparison to the same time period last year.

Table 1 indicates the reported pertussis cases by region in the Philippines. Thirty (22%) cases were confirmed out of 138 cases. Among the reported cases, 8 cases have died with a CFR of 5.80%. Majority of the reported pertussis cases came from Regions 4A (28%), NCR (22%) and 11 (15%). (See Annex A for case distribution by Barangay)

**Fig. 1 Alert and Epidemic Thresholds and Reported Pertussis Cases by Morbidity Week, Philippines, as of July 1, 2017 (N=138)**

Six pertussis cluster<sup>(1)</sup> were identified as of July 1, 2017. No new cluster<sup>(1)</sup> pertussis cases identified within the past 4 Morbidity Weeks. (See Annex B for case distribution by Cluster<sup>(1)</sup>)

**Fig. 2 Reported Pertussis Cases by Region, Philippines, as of July 1, 2017 (N=138)**

### PROFILE OF CASES

As shown in figure 3, there are **66 males and 72 females**. Most (57%) of them belonged to the **0 to 3 months old age group**. Seventy (51%) cases were not administered with any dose of DPT/pentavalent vaccine (Figure 4). Eight (6%) cases of pertussis have **died** (Figure 5).

**Fig. 3 Reported Pertussis Cases by Age Group and Sex, Philippines, as of July 1, 2017 (N=138)**

**Fig. 4 Reported Pertussis Cases by DPT Doses and Age Group, Philippines, as of July 1, 2017 (N=138)**

**Fig. 5 Reported Pertussis Cases by Outcome, Philippines, as of July 1, 2017 (N=138)**

### Standard Case Definition of Pertussis

#### • Clinical Case:

- A person with a cough lasting at least 2 weeks with at least one of the following:
  - paroxysms (i.e. fits) of coughing
  - inspiratory "whooping"
  - post-tussive vomiting (i.e. vomiting immediately after coughing)
  - without other apparent cause

### Case classification

#### • Clinically-confirmed case:

- A case that meets the clinical case definition but is not laboratory confirmed.

#### • Probable case:

- Meets the clinical case definition, is not laboratory confirmed, and is not epidemiologically linked to a laboratory-confirmed case.

#### • Laboratory-confirmed case:

- A case of acute cough illness of any duration with a positive culture for *B. pertussis*; OR
- A case that meets the clinical case definition and is confirmed by PCR; OR
- A case that meets the clinical definition and is epidemiologically linked directly to a case confirmed by either culture or PCR.
