Breakdown of active cases

A patient with an RT-PCR confirmed case of COVID-19 without any symptoms.

A patient with mild symptoms and stable vital signs. Unless the patient belongs to high-risk subgroups or has comorbidities, they are often not admitted to a treatment facility.

A patient with difficulty breathing, altered mental status, considered high-risk or in need of hospital care.

A patient with impending or ongoing respiratory failure, in need of mechanical ventilation, or with evidence of end-organ damage.

Note. A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities must be admitted to a treatment facility. Severe or critical cases must be admitted to a treatment facility, regardless of inclusion in high-risk subgroups or presence of comorbidities.

Notes.

- 1. The DOH is continuously validating the number of positive individuals as reported by the laboratories. When necessary, they are deduplicated. As such, the discrepancy with the number of confirmed cases do not necessarily reflect backlogs in case validation.
- 2. Please visit www.doh.gov.ph/covid19tracker for details regarding the testing output per laboratory.

Confirmed cases by date of onset of illness

Confirmed deaths by date of death

Notes.

- 1. Bars with **red** colors indicate the actual date of onset or date of death for newly-reported cases.
- 2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
- 3. Owing to delays in reporting, case counts after the **dashed lines** are still incomplete. Hence, we urge caution in interpreting data beyond this date. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.
