Breakdown of Active Cases

Note. A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities must be admitted to a treatment facility. Severe or critical cases must be admitted to a treatment facility, regardless of inclusion in high-risk subgroups or presence of comorbidities.

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS

CONFIRMED DEATHS BY DATE OF DEATH

Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for cases reported from August 9 to August 15.
2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
3. **Owing to delays in reporting, case counts in the gray shaded area are still most likely incomplete. Hence, we urge caution in interpreting data beyond this date.** Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

Region VII - Central Visayas

Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for newly-reported cases from June 28 to July 4.
2. The cases from the "NCR" graph have been separated from cases of the "Luzon" graph.
3. The cases from the "Region VII - Central Visayas" graph have been separated from the "Visayas" graph.
4. Owing to delays in reporting, case counts within the gray area are still incomplete. Hence, we urge caution in interpreting data beyond this date. The axis for dates have been relabeled to better reflect data before gray area. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

COVID-19'S CAPACITY TO SPREAD (R_t VALUE)

October 30: 0.93 ± 0.02

October 31: 0.94 ± 0.02

**Time-varying
Reproduction number**

The time-varying **reproduction number (R_t)** indicates the possible number of people being infected by a sick person, at a specific time with control measures in place.

IMPORTANT NOTE. The reproduction number is measured using symptom onset, we do not include in the interpretation the past 14-16 days given the time between symptoms, health seeking, testing, and reporting. When interpreting the reproduction number keep in mind that it is a **lagging indicator (that is, it provides a snapshot of the situation two weeks ago)**. Please do not expect this number to change daily.

- The reproduction number (R_t) was around 2 early on in the outbreak. This meant that each confirmed person with COVID was infecting 2 other people.
- Based on the latest data, we are 95 percent confident that $R_t = 0.94 \pm 0.02$, which means each infected individual was infecting an average of 0.94 other persons **around two weeks ago**.
- **Lowering this value is made possible through efforts such as social distancing, wearing of PPE, and other means to stop the spread of the virus.**
- The goal is for R_t to be less than 1, which would mean that, on average, an infected person is infecting less than one person, eventually stopping the transmission of COVID-19.

BEHAVIORAL MESSAGES

- As many parts of the country was destructed by flood, the public is encouraged to be knowledgeable about the disease called Leptospirosis and be aware of the level of its risks. If possible, avoid wading in floodwater or wear boots if it's just within the foot level. Watch for its symptoms such as fever, body malaise, diarrhea, eye redness, chills, headache, and rashes. Doxycycline is a prescription antibiotic medication for the treatment of the said disease.
- While we are still in the midst of the COVID-19 pandemic, it is more essential for us to be prepared on any natural disaster that may happen and do the necessary precautions especially for those who are in the evacuation centers. Evacuees are encouraged to follow the house rules, use trash bags that can be tightly closed, do not overfill trash bags to prevent tearing, keep garbage out of the living quarters, pick up trash every day if possible, segregate medical (face mask, syringe, needle) waste from regular waste, use proper trash bins for used syringes and needles.
- Whether at home or in an evacuation center, everyone should protect themselves and others from COVID-19. Local governments are also encouraged to maintain the minimum public health standards regarding COVID-19 in evacuation centers and facilities, such as wearing of face masks, physical distancing, and designating handwashing areas.

Iwasan ang Leptospirosis!
