Breakdown of Active Cases

2,300

(8.6%)

Asymptomatic

A patient with an RT-PCR confirmed case of COVID-19 without symptoms.

22,247

(83.1%)

Mild

A patient with mild symptoms and stable vital signs. Unless the patient belongs to high-risk subgroups or has comorbidities, they are often not admitted to a treatment facility.

125

(0.5%)

Moderate

A patient with clinical signs of non-severe pneumonia

742

(2.8%)

Severe

A patient with clinical signs of severe pneumonia or severe acute respiratory infection

1,370

(5.1%)

Critical

A patient with impending or ongoing respiratory failure, in need of mechanical ventilation, or with evidence of end-organ damage or with septic shock.

Note. A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities must be admitted to a treatment facility. Severe or critical cases must be admitted to a treatment facility, regardless of inclusion in high-risk subgroups or presence of comorbidities.

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS

CONFIRMED DEATHS BY DATE OF DEATH

Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for cases reported from August 9 to August 15.
2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
3. **Owing to delays in reporting, case counts in the gray shaded area are still most likely incomplete. Hence, we urge caution in interpreting data beyond this date.** Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS (DISAGGREGATED)

Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for newly-reported cases from December 13 to 19.
2. The cases from the “NCR” graph have been separated from cases of the “Luzon” graph.
3. The cases from the “Region VII - Central Visayas” graph have been separated from the “Visayas” graph.
4. Owing to delays in reporting, case counts within the gray area are still incomplete. Hence, we urge caution in interpreting data beyond this date. The axis for dates have been relabeled to better reflect data before gray area. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

COVID-19’S CAPACITY TO SPREAD (R_t VALUE)

December 25: 0.91 ± 0.02

December 26: 0.96 ± 0.02

**Time-varying
Reproduction number**

The time-varying **reproduction number (R_t)** indicates the possible number of people being infected by a sick person, at a specific time with control measures in place.

IMPORTANT NOTE. The reproduction number is measured using symptom onset, we do not include in the interpretation the past 14-16 days given the time between symptoms, health seeking, testing, and reporting. When interpreting the reproduction number keep in mind that it is a **lagging indicator (that is, it provides a snapshot of the situation two weeks ago)**. Please do not expect this number to change daily.

- The reproduction number (R_t) was around 2 early on in the outbreak. This meant that each confirmed person with COVID was infecting 2 other people.
- Based on the latest data, we are 95 percent confident that $R_t = 0.96 \pm 0.02$, which means each infected individual was infecting an average of 0.96 other persons **around two weeks ago**.
- **Lowering this value is made possible through efforts such as social distancing, wearing of PPE, and other means to stop the spread of the virus.**
- The goal is for R_t to be less than 1, which would mean that, on average, an infected person is infecting less than one person, eventually stopping the transmission of COVID-19.

BEHAVIORAL MESSAGES

- For commuters, the minimum public health standards should always be the core of travelling in the new normal. Every commuter should properly wear face masks and shields, should avoid eating or talking during commutes, should distance himself/herself from people, should avoid letting symptomatic passengers in, and every commuter should always disinfect their belongings.
- Even after the holiday celebration, everyone is encouraged to wear face shields properly as this lessens the risk of getting COVID-19. Everyone should be wary of the standards when choosing the right face shield. The protective shield must fully cover the face, must not blur the vision of the wearer, and must be easy to disinfect. With the use of face shields, contact with droplets and other infectious particles will be lessened.
- The government is continuously reminding everyone to follow simple things that would reduce exposure to COVID-19 like wearing face masks at all times, maintain physical distancing, and practice hand hygiene and proper cough manners. Do this not just for yourselves, but also for the safety of your family and the community.
- Everyone is enjoined to stay healthy both physically and mentally. Eating a well-balanced diet, that includes plenty of fruits, vegetables and food rich in proteins is the best way to get all the essential nutrients we need for good health and normal immune function. Avoid eating high-sodium and high-sugar food. Avoid smoking, exercise daily, drink lots of water to avoid dehydration, and get an average of seven to eight hours of sleep as recommended.

HOW DO YOU REMAIN SAFE AND HEALTHY AMIDST THE COVID-19 PANDEMIC?

ALWAYS remember and practice the following:

Wash hands with soap and water for 20 seconds or more (Try singing the chorus of your favorite song while washing).

Use a hand sanitizer with 70% alcohol if you can't wash your hands for 20 seconds or more.

Avoid touching your face, especially your mouth, eyes, nose.

Make sure you keep 1 meter distance from other people.

Avoid touching things that many people touch like door handles, tables, chairs, etc.

Wear a mask while outside.

Frequently clean surfaces in your house, work or business. This includes tables, doorknobs, light switches, countertops, handles, desks, phones, keys, keyboards, toilets, faucets, and sinks.

Disinfect using a bleach solution (7 tablespoons [100 mL] bleach for 1 liter of clean water).

Disinfect your most used things (like phone, keys, eyeglasses, keyboard, etc.) with 70% alcohol solution.
