(4.6%)

**Critical**

A patient with impending or ongoing respiratory failure, in need of mechanical ventilation, or with evidence of end-organ damage or with septic shock.

**Note.** A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities must be admitted to a treatment facility. Severe or critical cases must be admitted to a treatment facility, regardless of inclusion in high-risk subgroups or presence of comorbidities.

### CONFIRMED CASES BY DATE OF ONSET OF ILLNESS

### CONFIRMED DEATHS BY DATE OF DEATH

#### Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for cases reported from August 9 to August 15.
2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
3. **Owing to delays in reporting, case counts in the gray shaded area are still most likely incomplete. Hence, we urge caution in interpreting data beyond this date.** Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

## CONFIRMED CASES BY DATE OF ONSET OF ILLNESS (DISAGGREGATED)

### Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for newly-reported cases from December 13 to 19.
2. The cases from the “NCR” graph have been separated from cases of the “Luzon” graph.
3. The cases from the “Region VII - Central Visayas” graph have been separated from the “Visayas” graph.
4. Owing to delays in reporting, case counts within the gray area are still incomplete. Hence, we urge caution in interpreting data beyond this date. The axis for dates have been relabeled to better reflect data before gray area. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

## COVID-19’S CAPACITY TO SPREAD ( $R_t$ VALUE)

January 1:  $0.80 \pm 0.02$

January 2:  $0.77 \pm 0.02$

**Time-varying  
Reproduction number**

The time-varying **reproduction number ( $R_t$ )** indicates the possible number of people being infected by a sick person, at a specific time with control measures in place.

**IMPORTANT NOTE.** The reproduction number is measured using symptom onset, we do not include in the interpretation the past 14-16 days given the time between symptoms, health seeking, testing, and reporting. When interpreting the reproduction number keep in mind that it is a **lagging indicator (that is, it provides a snapshot of the situation two weeks ago)**. Please do not expect this number to change daily.

- The reproduction number ( $R_t$ ) was around 2 early on in the outbreak. This meant that each confirmed person with COVID was infecting 2 other people.
- Based on the latest data, we are 95 percent confident that  $R_t = 0.77 \pm 0.02$ , which means each infected individual was infecting an average of 0.77 other persons **around two weeks ago**.
- **Lowering this value is made possible through efforts such as social distancing, wearing of PPE, and other means to stop the spread of the virus.**
- The goal is for  $R_t$  to be less than 1, which would mean that, on average, an infected person is infecting less than one person, eventually stopping the transmission of COVID-19.

## BEHAVIORAL MESSAGES

- With the new developments on the COVID-19 vaccine, it is best to remember that we need to stay informed with the right updates to be able to deliver the right updates to the others. Frequently Asked Questions (FAQs) are verified sources aimed to save every Filipino from the impact of the COVID-19 pandemic.
- Even with the promise of the COVID-19 vaccine, it is best to promise ourselves with another proven measure that will prevent the spread of COVID-19 - the minimum public health standards. Let us continuously follow simple preventive measures like properly wearing of face masks and full coverage face shields at all times, maintain physical distancing, and practice hand hygiene and proper cough manners. Let us also avoid crowded areas and to make sure we have proper air ventilation in anywhere we go. Let us do this together to stop the spread of COVID-19.
- Everyone is enjoined to stay healthy both physically and mentally. Eating a well-balanced diet, that includes plenty of fruits, vegetables and food rich in proteins is the best way to get all the essential nutrients we need for good health and normal immune function. Avoid eating high-sodium and high-sugar food. Avoid smoking, exercise daily, drink lots of water to avoid dehydration, and get an average of seven to eight hours of sleep as recommended.
